A screenshot walkthrough of the demo shop: every page that contains a form, with the forms and their fields explained. Pair it with **Pages and Forms Reference** (`PAGES_AND_FORMS.md`), which documents every field and its server-side validation rules in table form.

Everything below was captured from a running demo seeded with the standard seed data (admin `admin@libanpost.example`, one shop "LibanPost eShop", 18 products, three coupons, one tax class). Screens differ slightly from your instance if settings change (theme, email transport, payment provider).

Home page

Not a form page — it is the storefront landing: hero, search box (top bar), department menu, featured products and best sellers. The **search** box in the banner is the one form element; submitting it goes to `/Catalog?q=…` and drives the server-side autocomplete at `/Catalog/Suggest`.

Catalogue — `/Catalog`

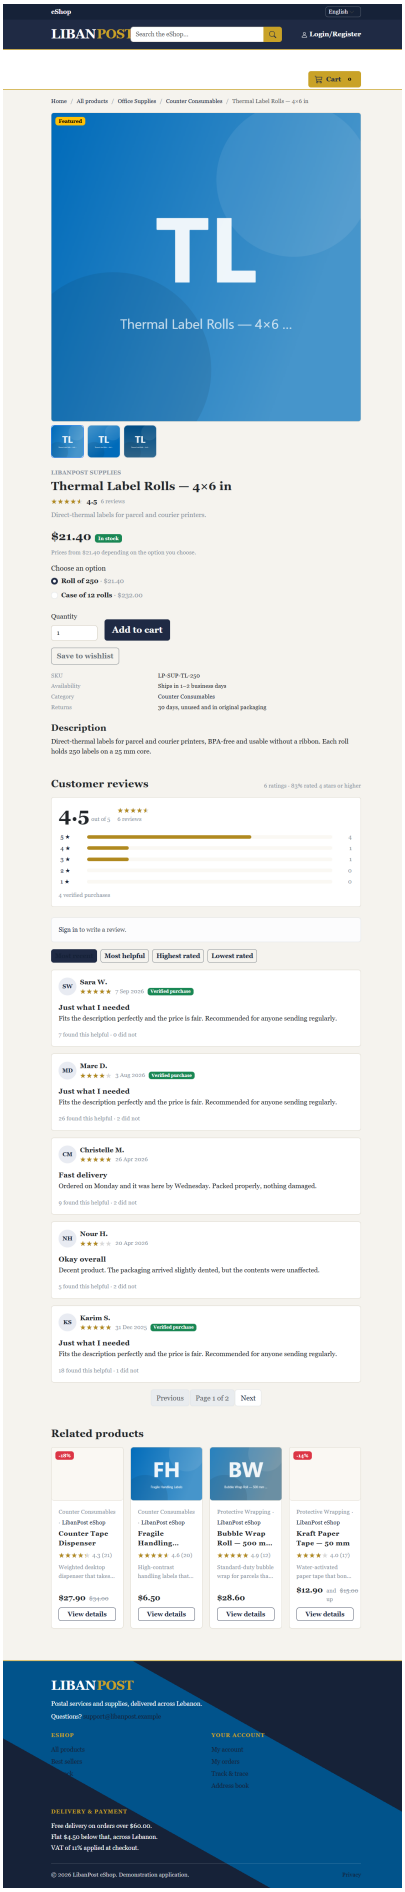

Catalogue with filter sidebar

The left panel is the catalogue **filter form** (a GET form — filters become URL query parameters and can be bookmarked):

- **Search** — free text, matched against product name, brand and SKU.
- **Department / Category** — links that pre-select `?category=…`.
- **Price min / max** — numeric range; anything non-numeric is ignored.
- **Sort** — dropdown (newest, price low→high, price high→low, best sellers…).
- **Filter** applies; **Reset** returns to the plain listing.

Product cards expose an **Add** button (a POST form that adds the first default variant to the cart), the price band "from …", stock hint, and a ratings line.

Product details — `/product/{slug}`

Product page

The richest storefront page. Forms on it:

- **Choose an option** — one **radio** per variant (each shows its own price, e.g. *Roll

of 250 — $21.40*). A variant must be picked before "Add to cart" works; the server rejects an unselected or inactive variant.

- **Quantity** — a number input; invalid or huge quantities are re-checked on the server.
- **Add to cart** — POST; a successful add either bounces to the cart or shows the updated

cart badge.

- **Save to wishlist** — separate POST form; only works while signed in.
- The meta row shows **SKU, availability, delivery estimate, returns** — all server

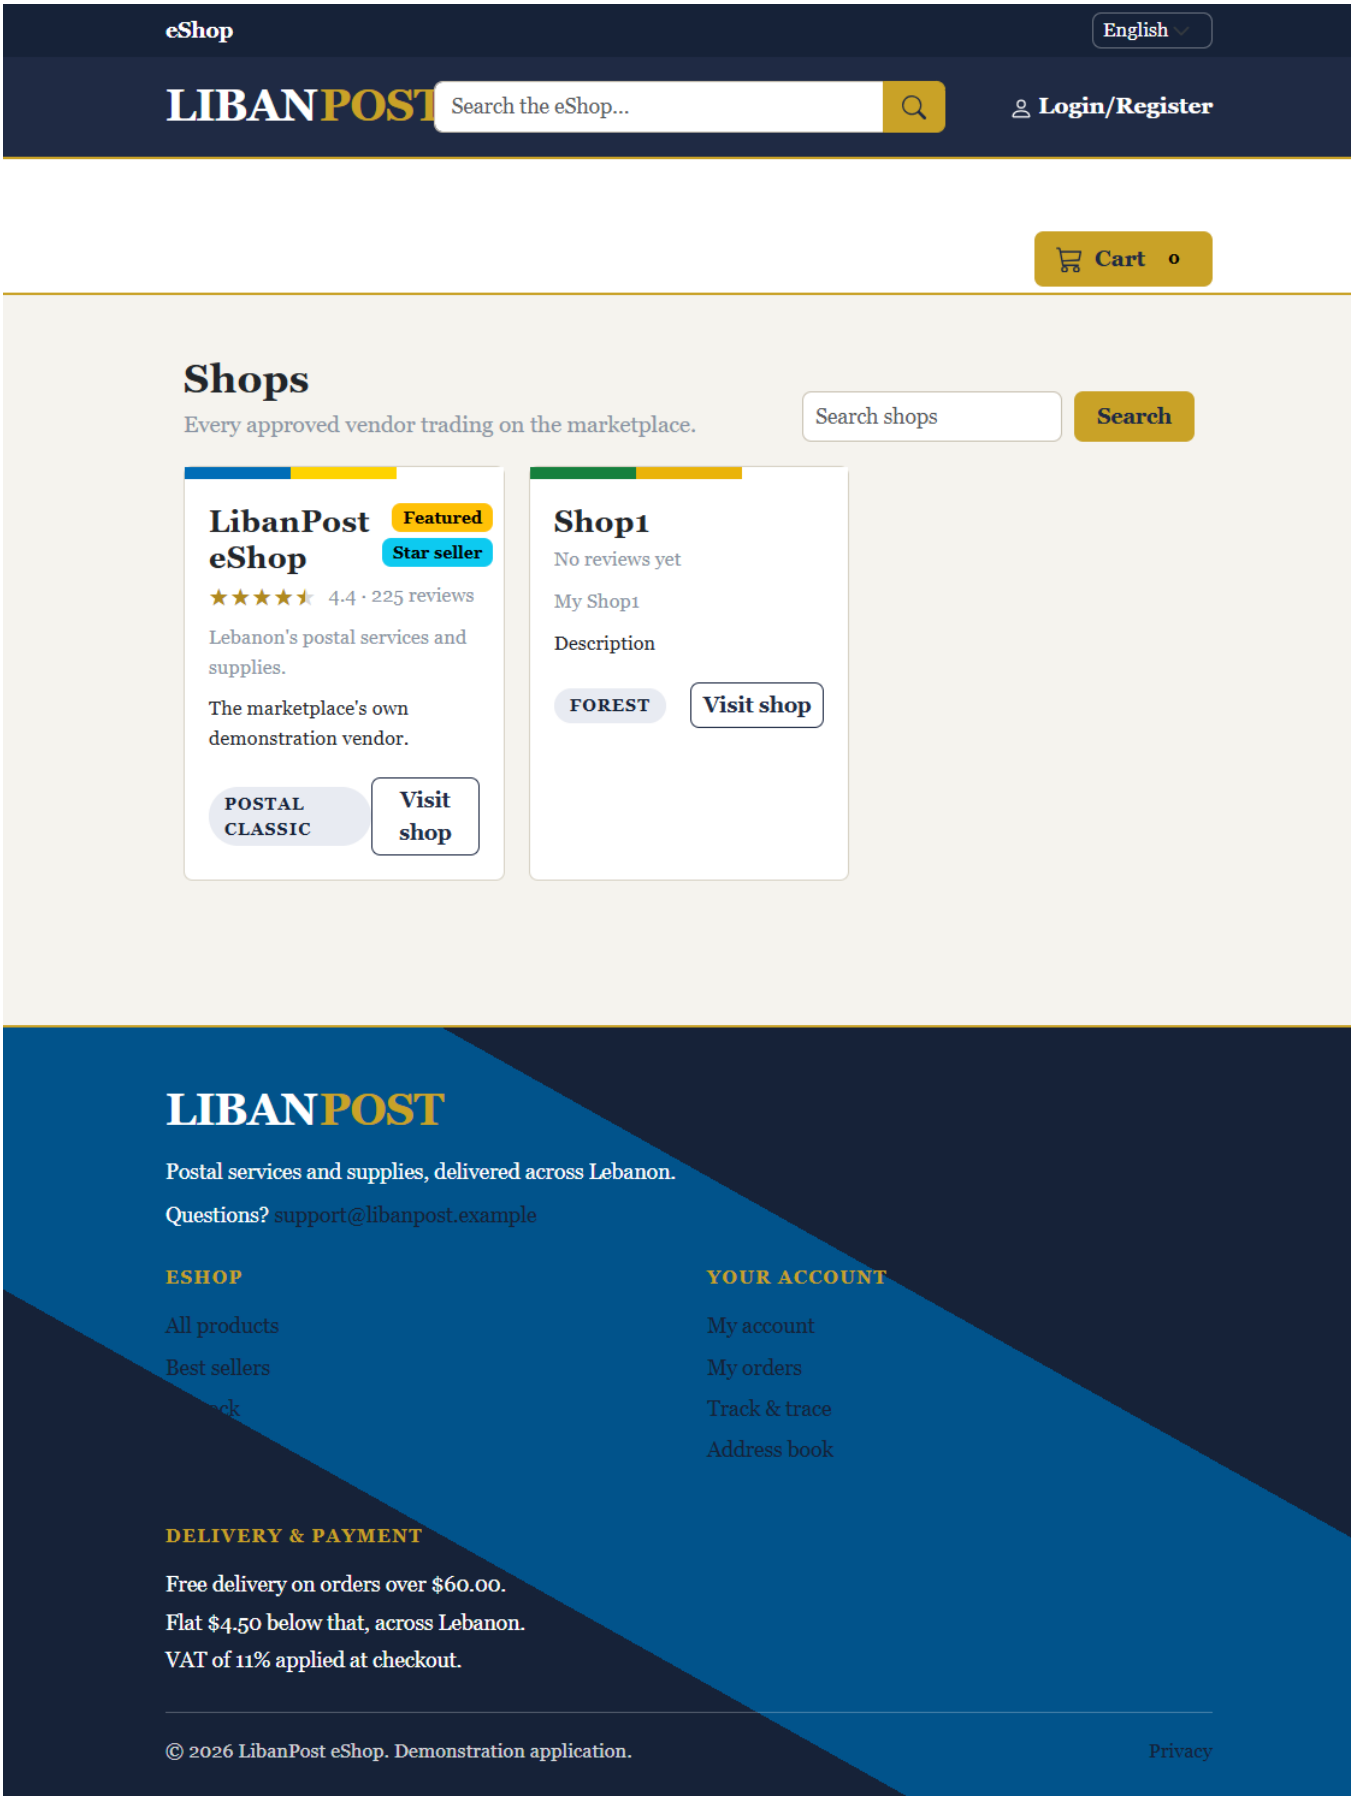

computed, not editable.

- **Customer reviews** — for reviews you own, **Delete** buttons appear; for every review,

Helpful (n) / Not helpful (n) are per-customer POST votes.

- The write-a-review form only appears if you have bought and received the item.

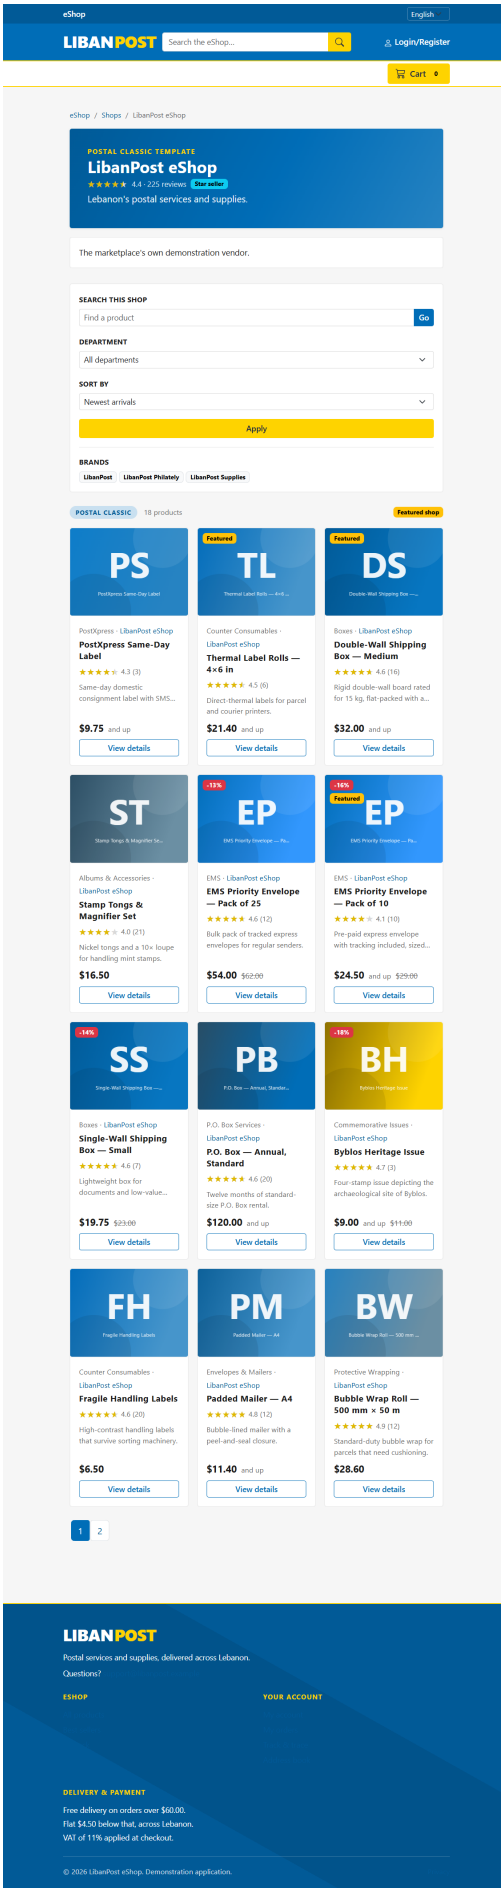

Shops directory — `/Shops`

Shops directory

A search box (GET) over shop names plus one card per approved shop. Each card links to the shop storefront.

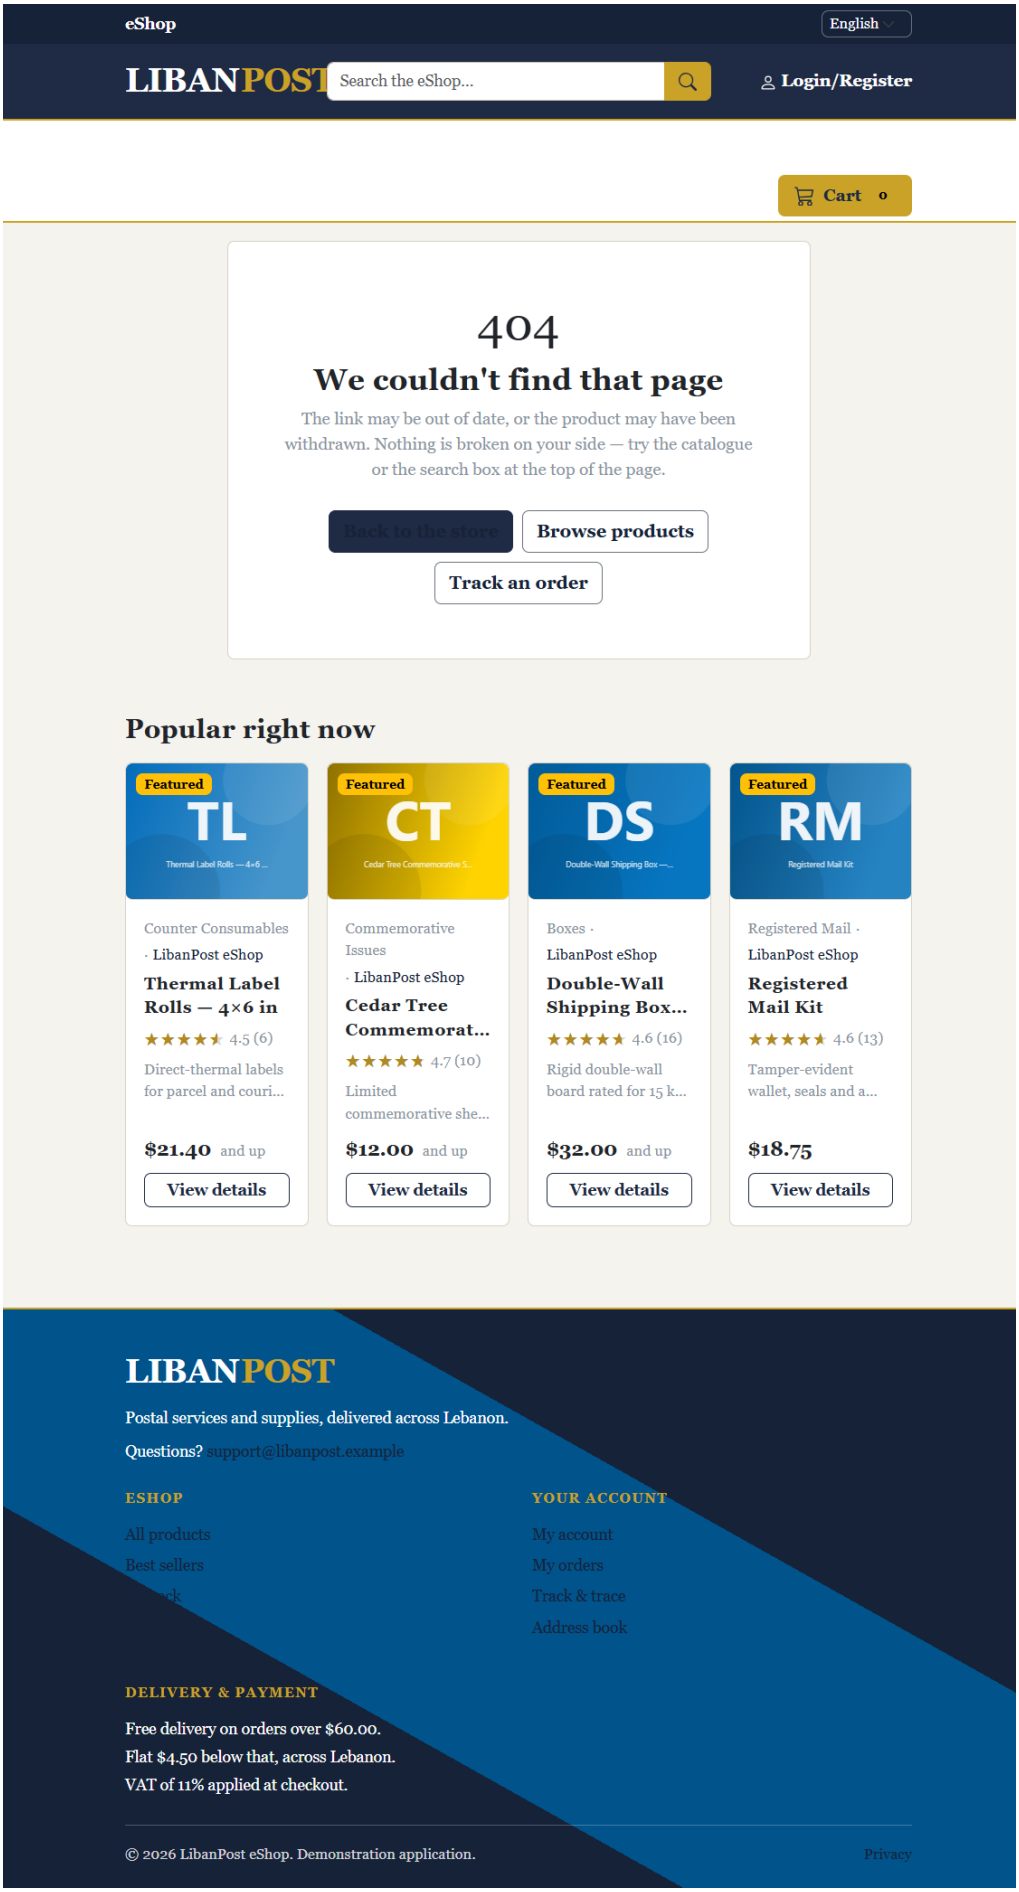

A shop's storefront — `/shop/{slug}`

Shop storefront

The same catalogue view, but scoped to one shop and coloured by that shop's template theme. Filter/search forms behave exactly like the catalogue. Note the shop policy column (shipping rate, free-shipping threshold, commission is *not* shown to shoppers).

Page not found (the fallback)

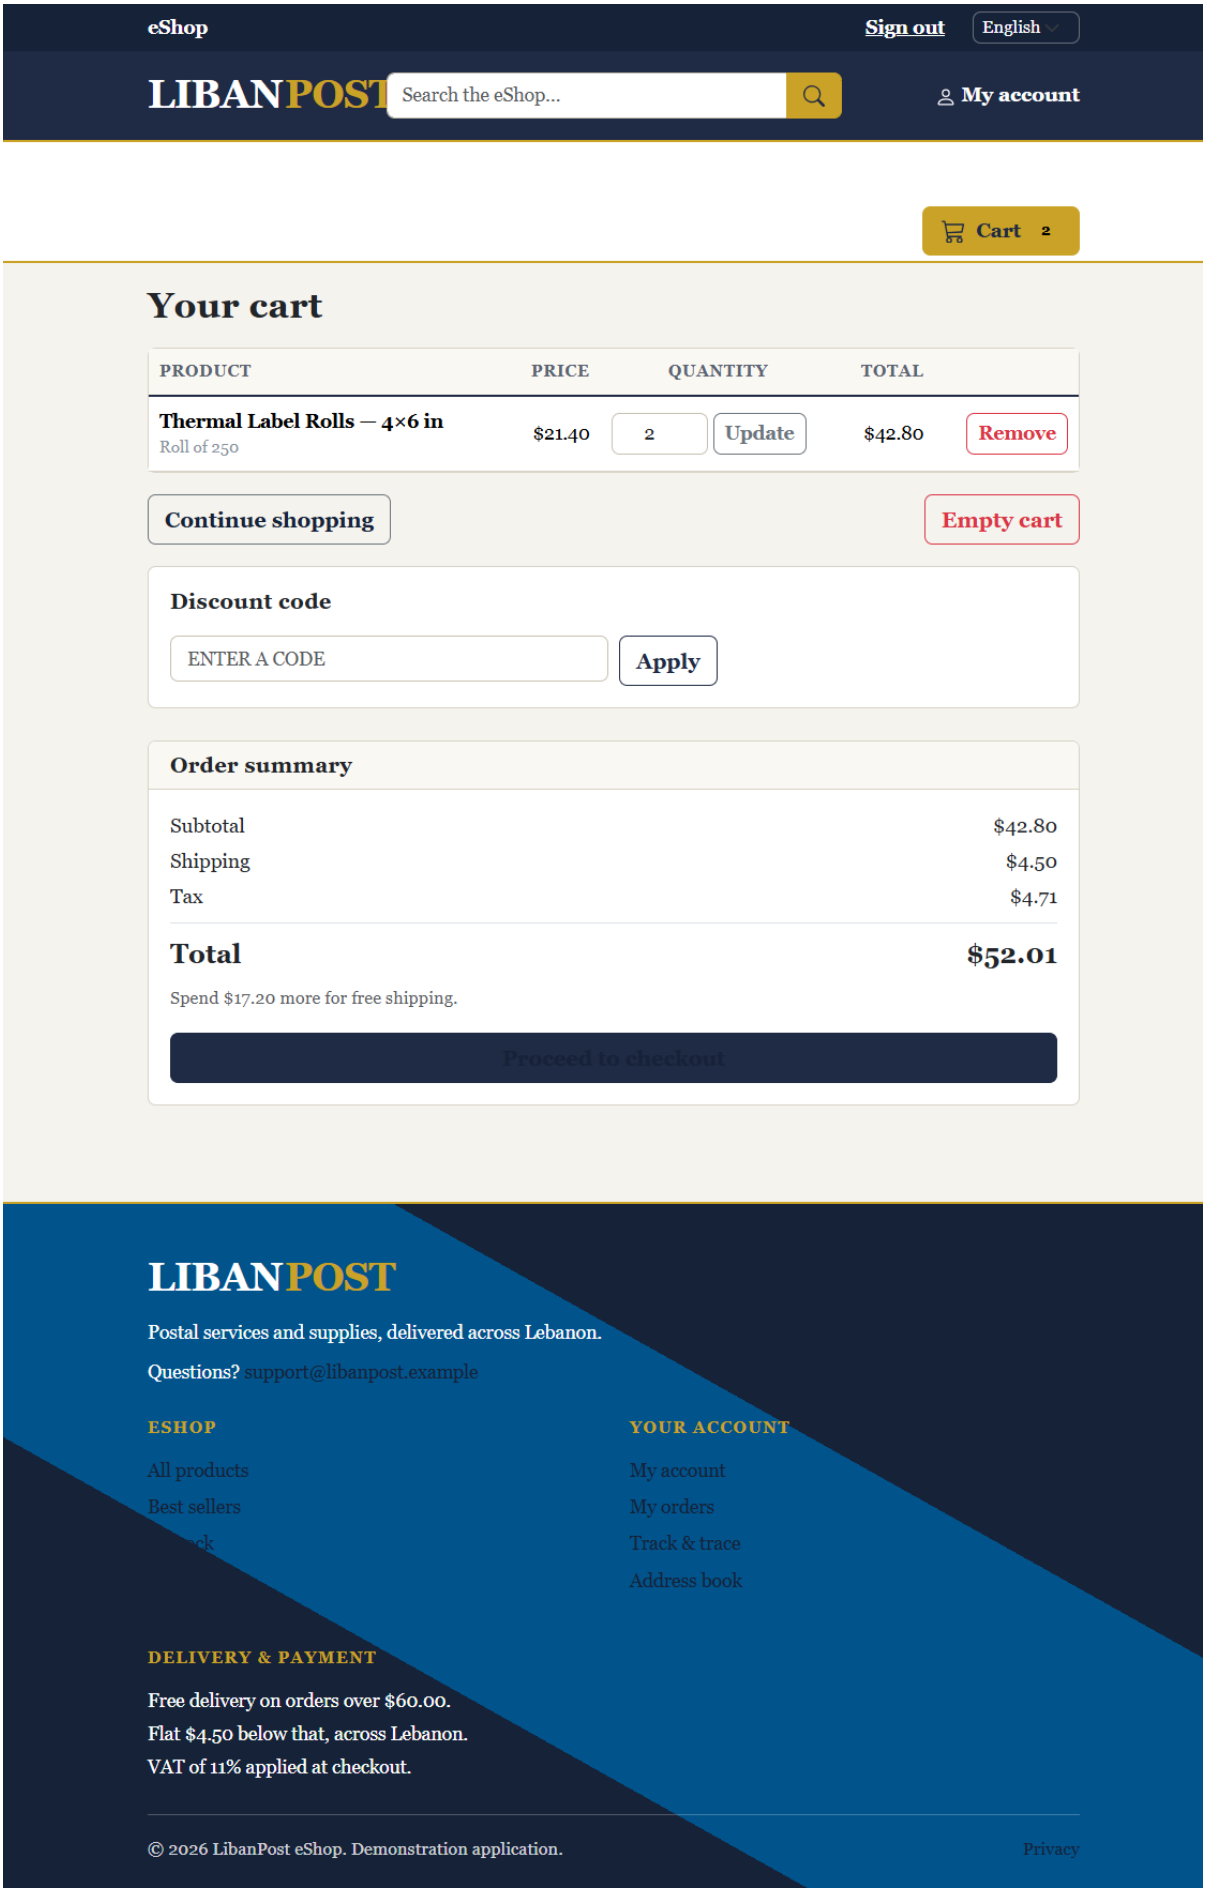

Not found page

Whatever breaks — a retired product slug, a mistyped order number — lands here with links back to the store and the catalogue. No forms; useful to confirm your 404 handling is custom and friendly.

Part 2 — Buying

Cart

- **Quantity** per line — a number input with **Update** (POST, re-prices the line).
- **Remove** per line — POST form.
- **Discount code** — a text box plus **Apply** (POST). Codes are matched

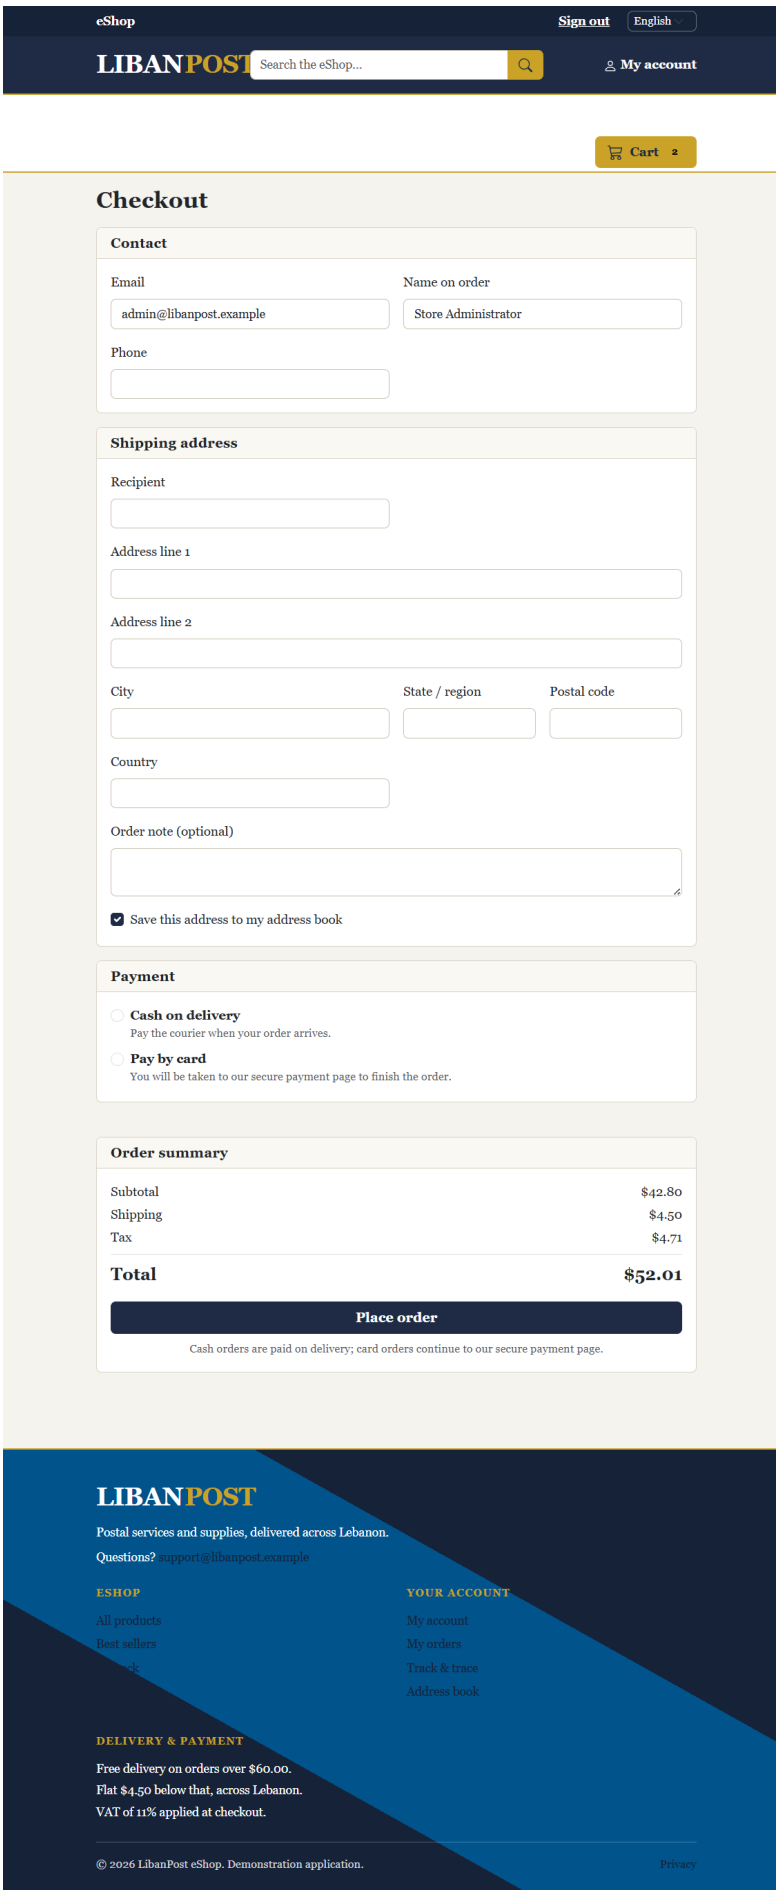

case-insensitively; rules (minimum spend, expiry, total/per-user limits, scope) are re-checked at order time, so an expired code simply stops discounting.

- **Order summary** — subtotal, shipping (free over the threshold), and **tax** computed

from the line's tax class (11 % in this seed). "Spend $X more for free shipping" hints at the threshold.

- **Proceed to checkout** takes you to the checkout form.

Checkout — `/Checkout`

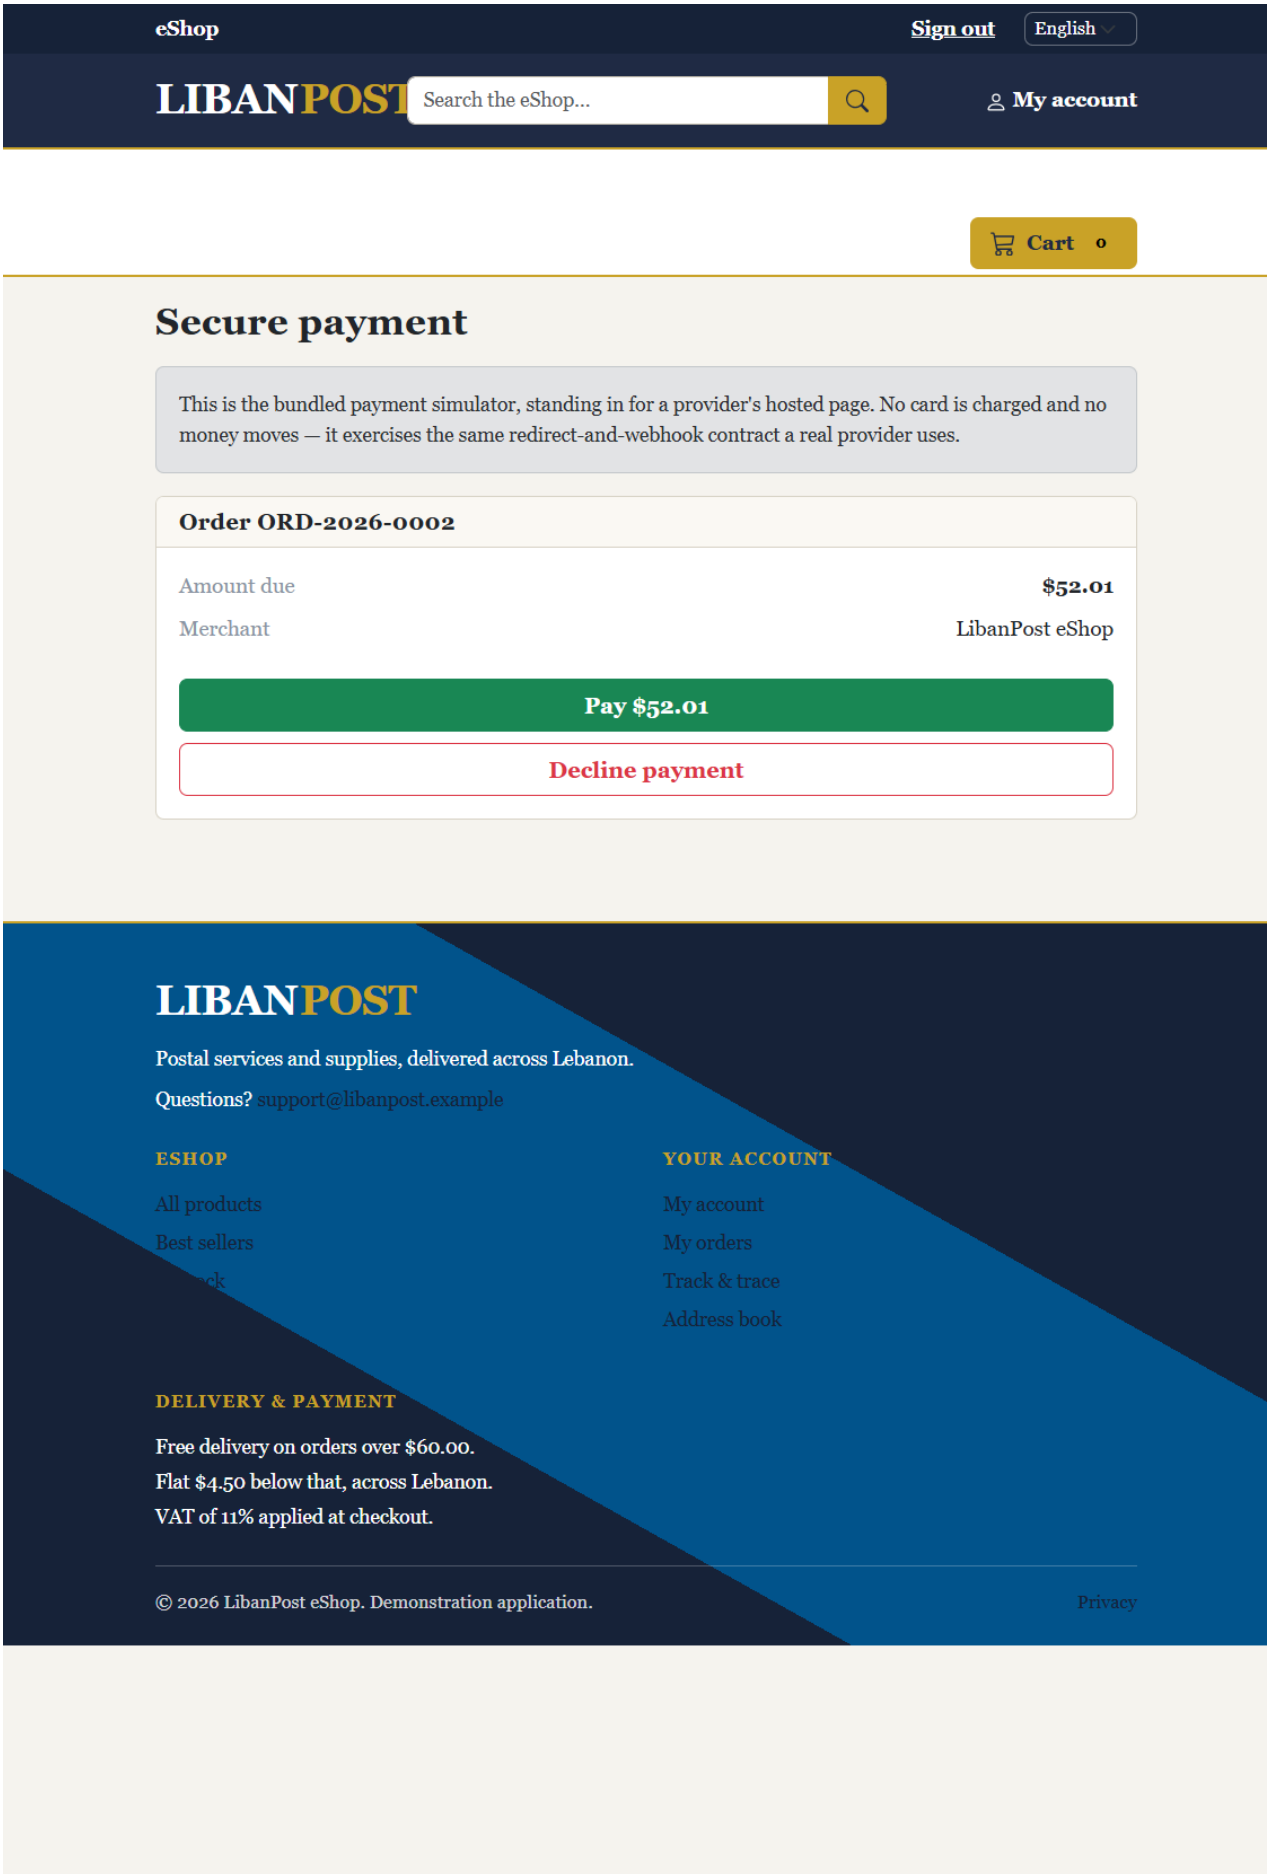

Checkout form

The biggest shopper form, grouped into four fieldsets:

- **Contact** — `Email` (required, valid, ≤256 chars; the receipt goes here), `Name on order (required), Phone` (optional, phone format). Both are pre-filled when you are signed in.
- **Shipping address** — `Recipient`, `Address line 1` (required), `Address line 2` (optional), `City`, `State/region`, `Postal code`, `Country` (required fields enforced server-side), and `Order note` (≤1000 chars, shown to staff). **Save this address to my address book** controls whether the address is kept for next time.
- **Payment** — radio: **Cash on delivery** (order completes as *pending payment* → paid on delivery) or **Pay by card** (order is created, then you are redirected to the provider's hosted page — in this demo, the simulator).
- **Order summary** — the same totals as the cart, including tax.
- **Place order** — an anti-double-submit hidden key prevents repeat orders on double-clicks.

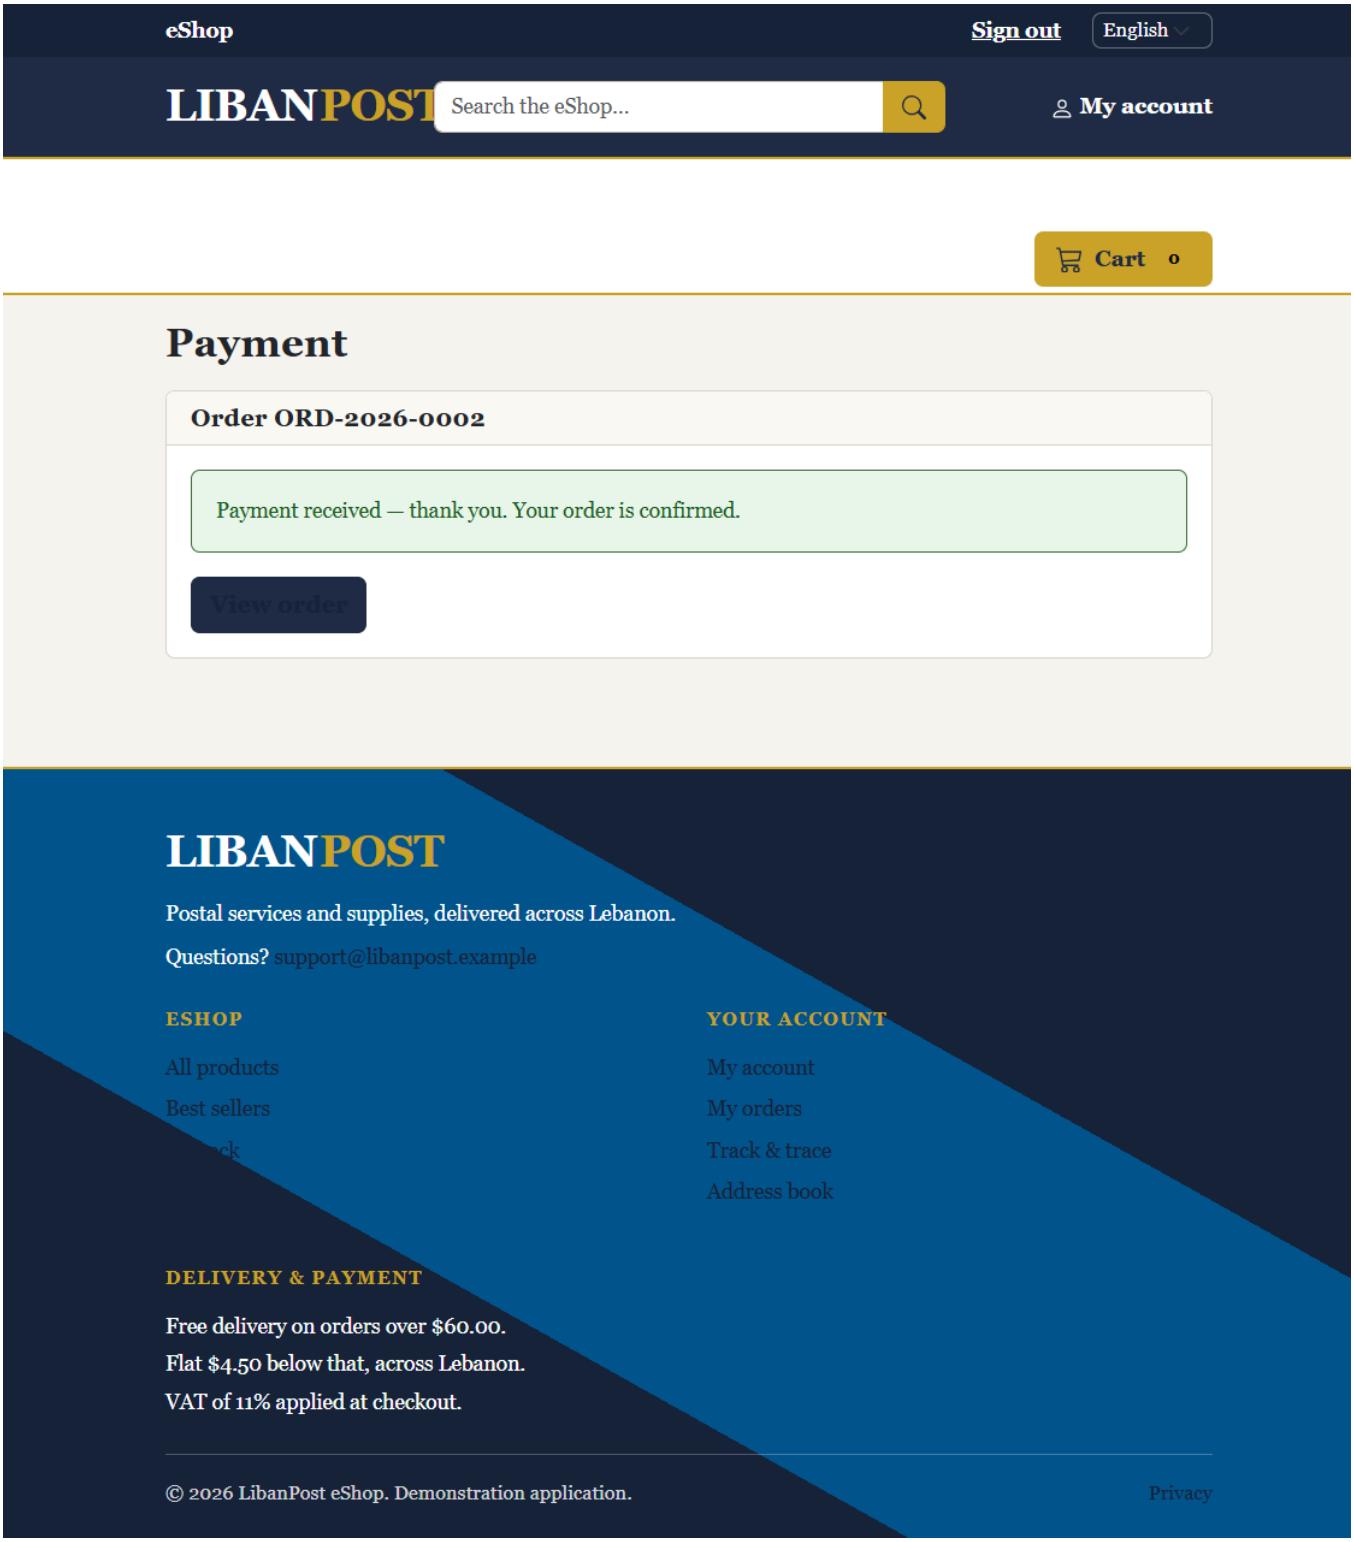

Payment (simulator) — `/Payments/Simulator?reference=…`

Payment simulator

The demo stands in for a real provider's hosted page: it shows the order reference, the amount due and the merchant, with **Pay** and **Decline payment** buttons. No card is charged; the page exercises the same redirect-and-return contract a real gateway would.

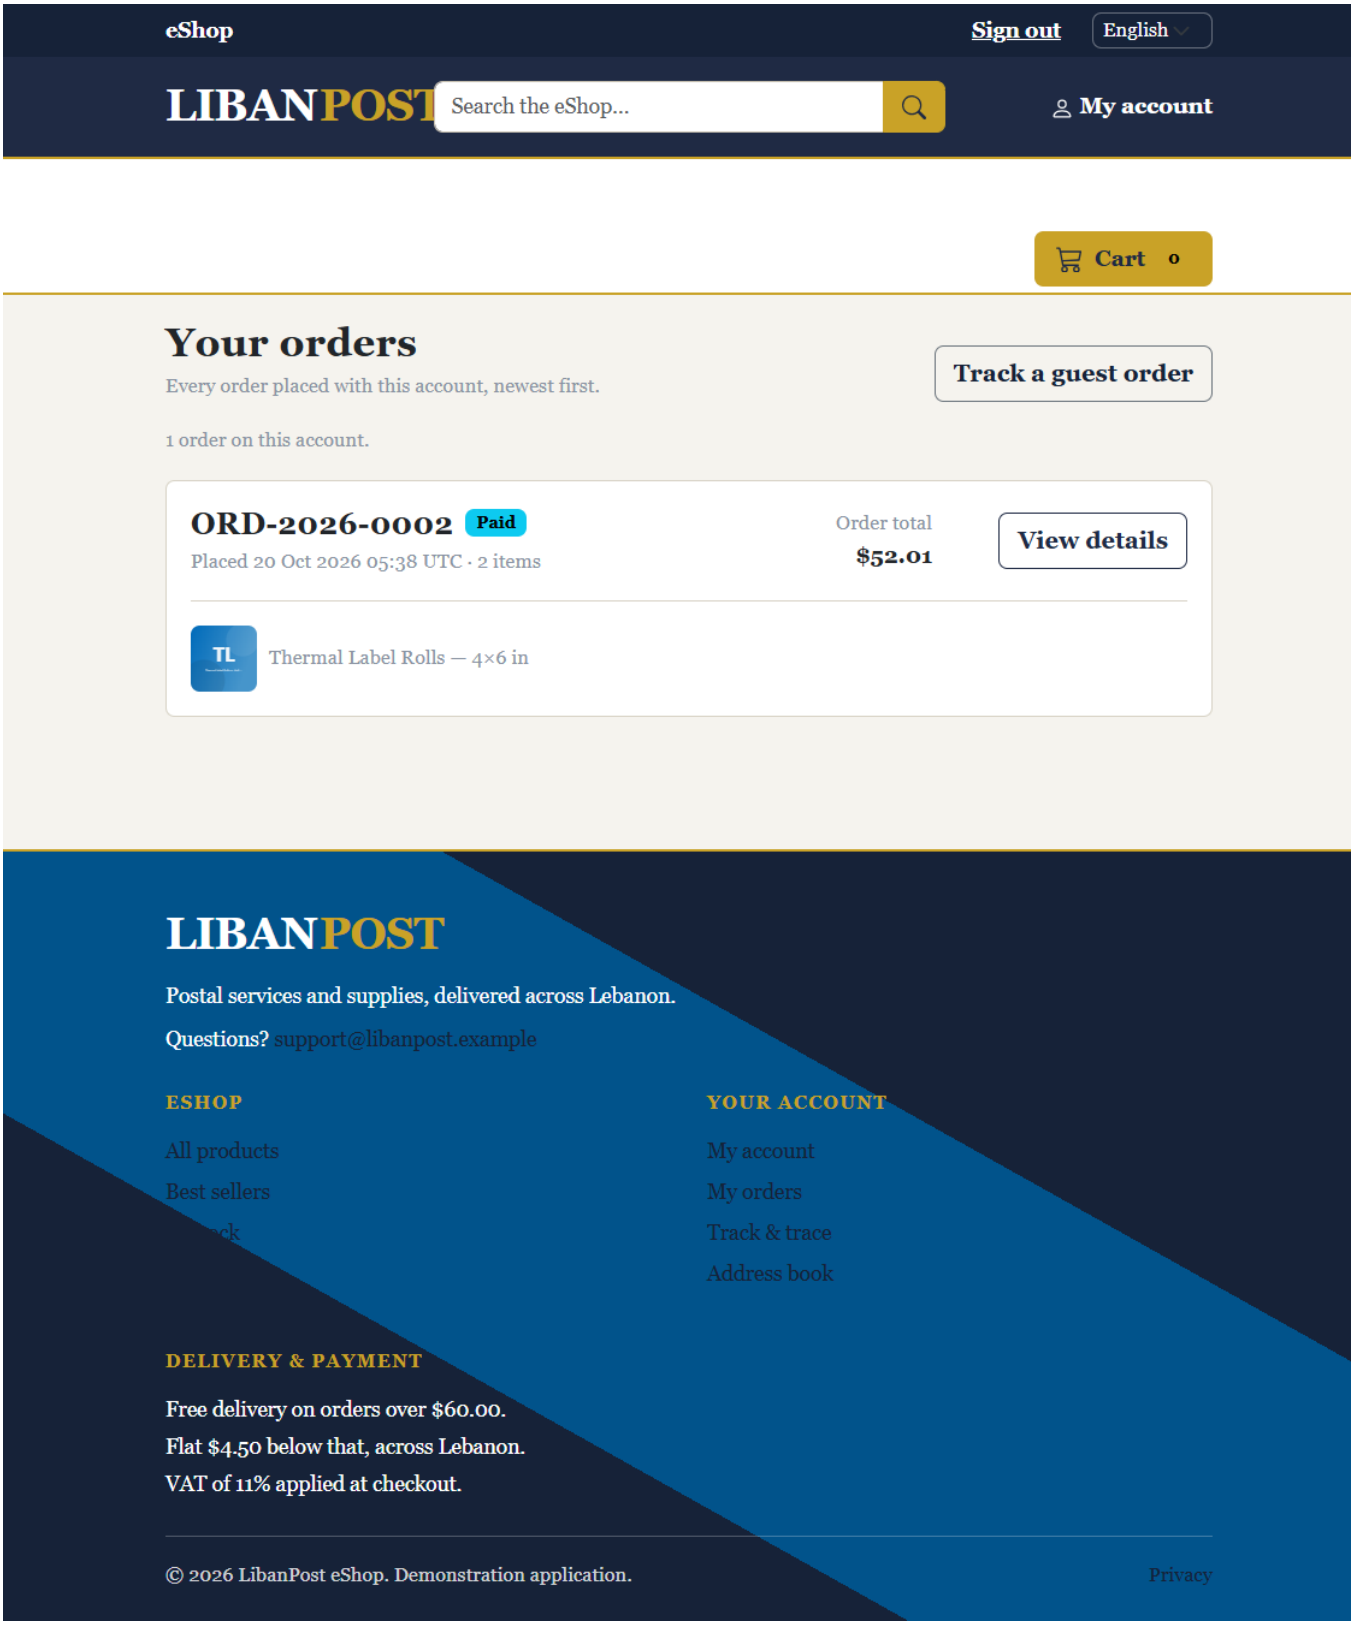

Payment return — `/Payments/Return/{id}`

Payment received

After paying you come back to the store with a success banner and a **View order** button. A declined payment returns here with a failure message and the order stays unpaid.

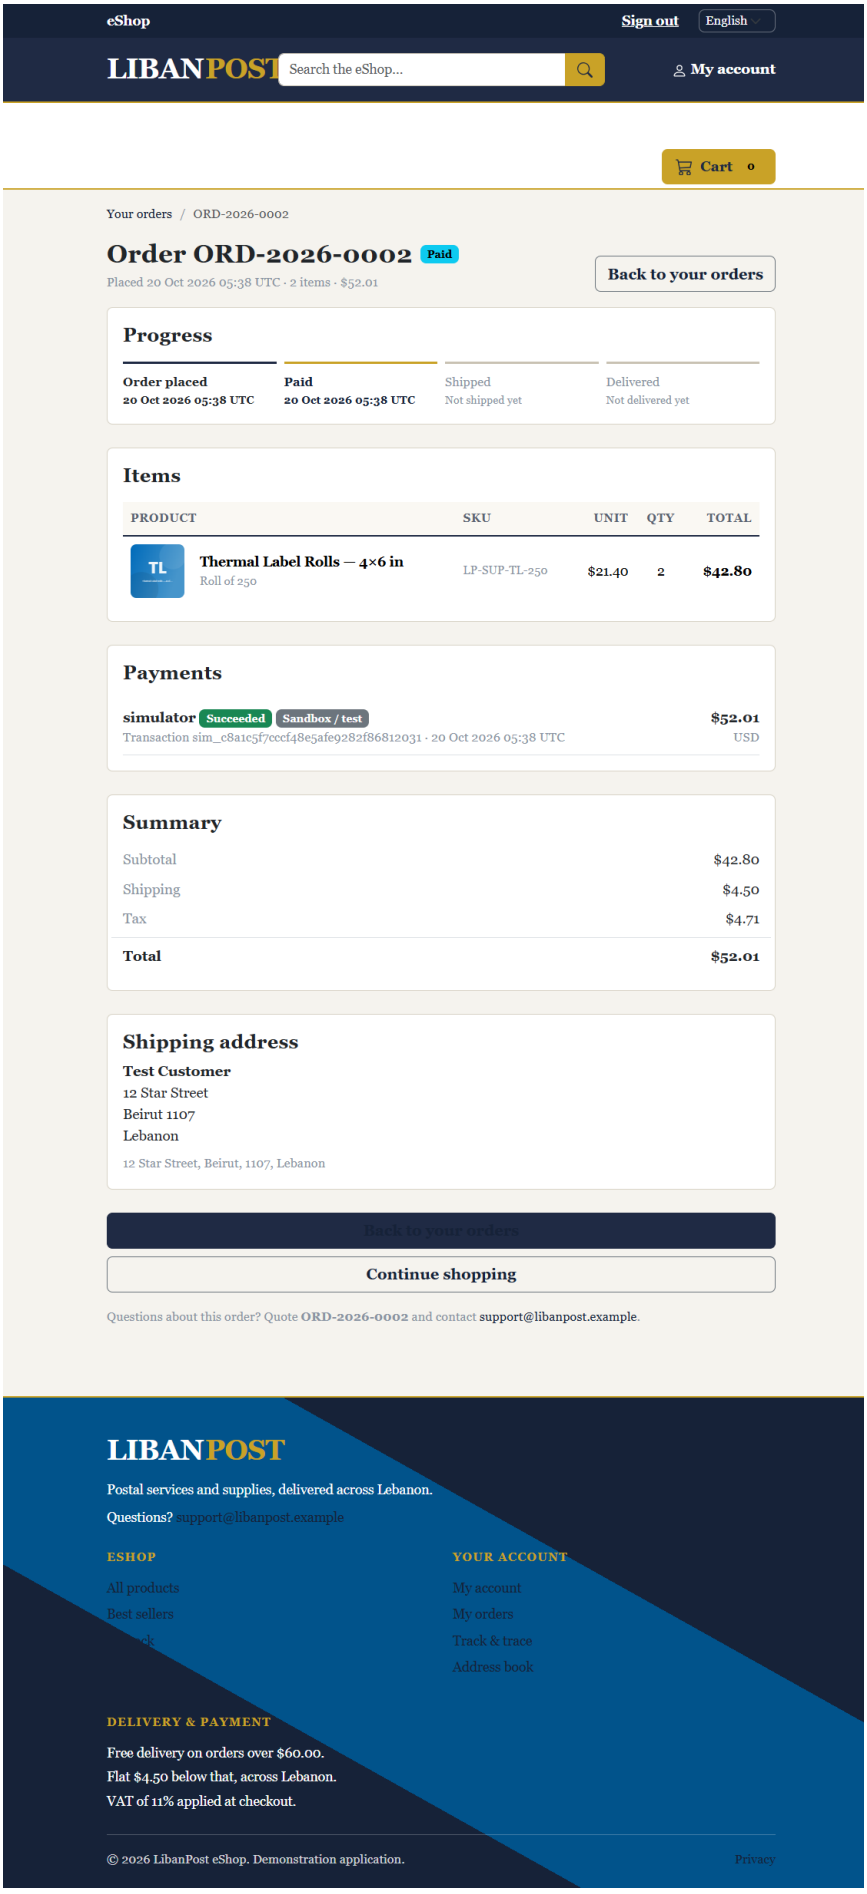

Your orders — `/Orders`

My orders

Order history cards: order number, status badge (*Paid*, *Shipped*…), placement date, item count, total, and a thumbnail row. **View details** opens the full order.

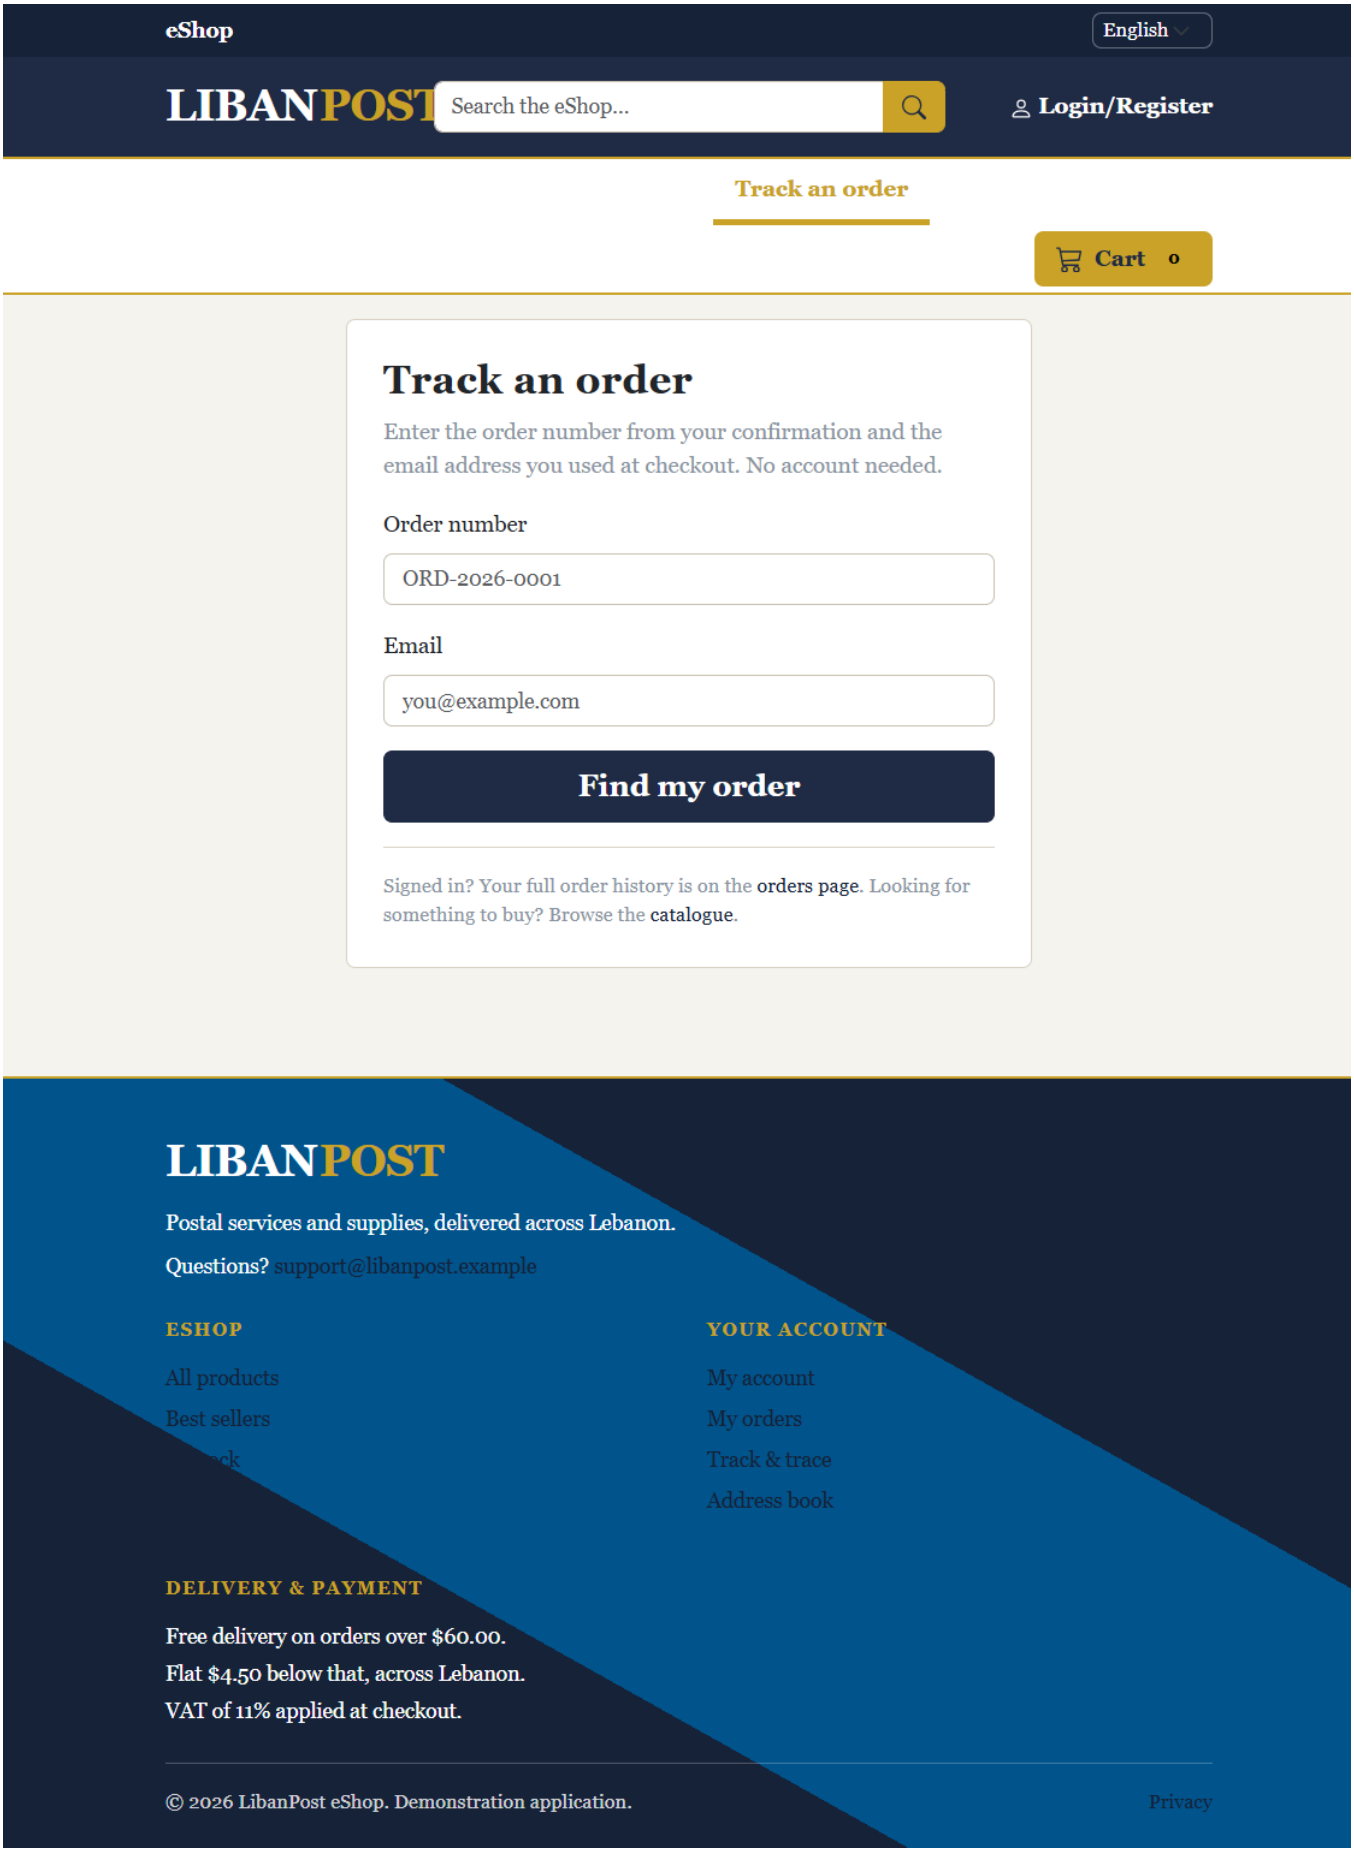

Order detail (customer view) — `/Orders/Details/{id}`

Customer order details

No editable forms — a read-only view with the status **progress bar** (order placed → paid → shipped → delivered with timestamps), item lines with SKU/qty/price, the **payments** block (provider, status, transaction id, amount) — and the shipping address. A quote line at the bottom tells the customer which support email to contact.

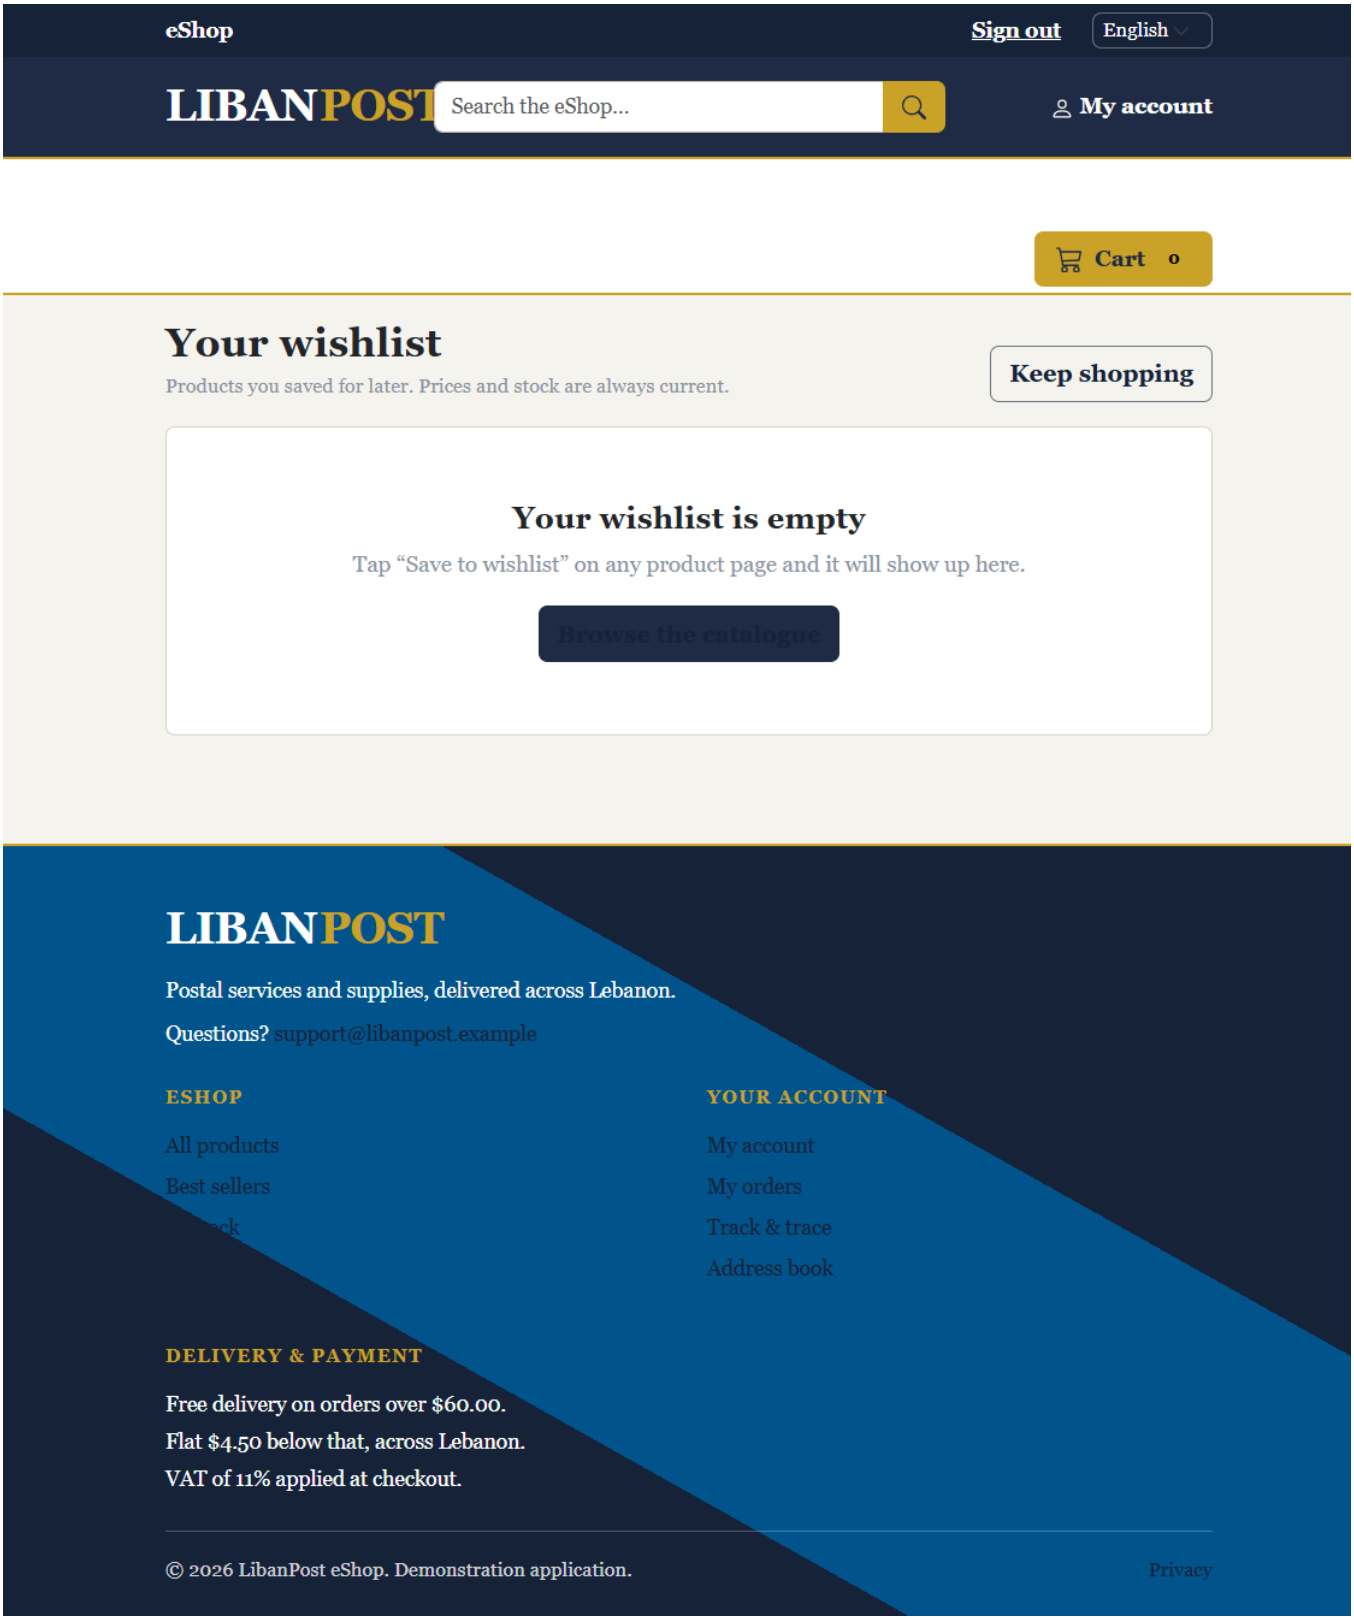

Guest order tracking — `/Orders/Track`

Track an order

Two fields, both required: **Order number** and the **email used on the order** (must be a valid email). A match shows the same progress view as the logged-in order history — useful for shoppers who created no account.

Wishlist — `/Account/Wishlist`

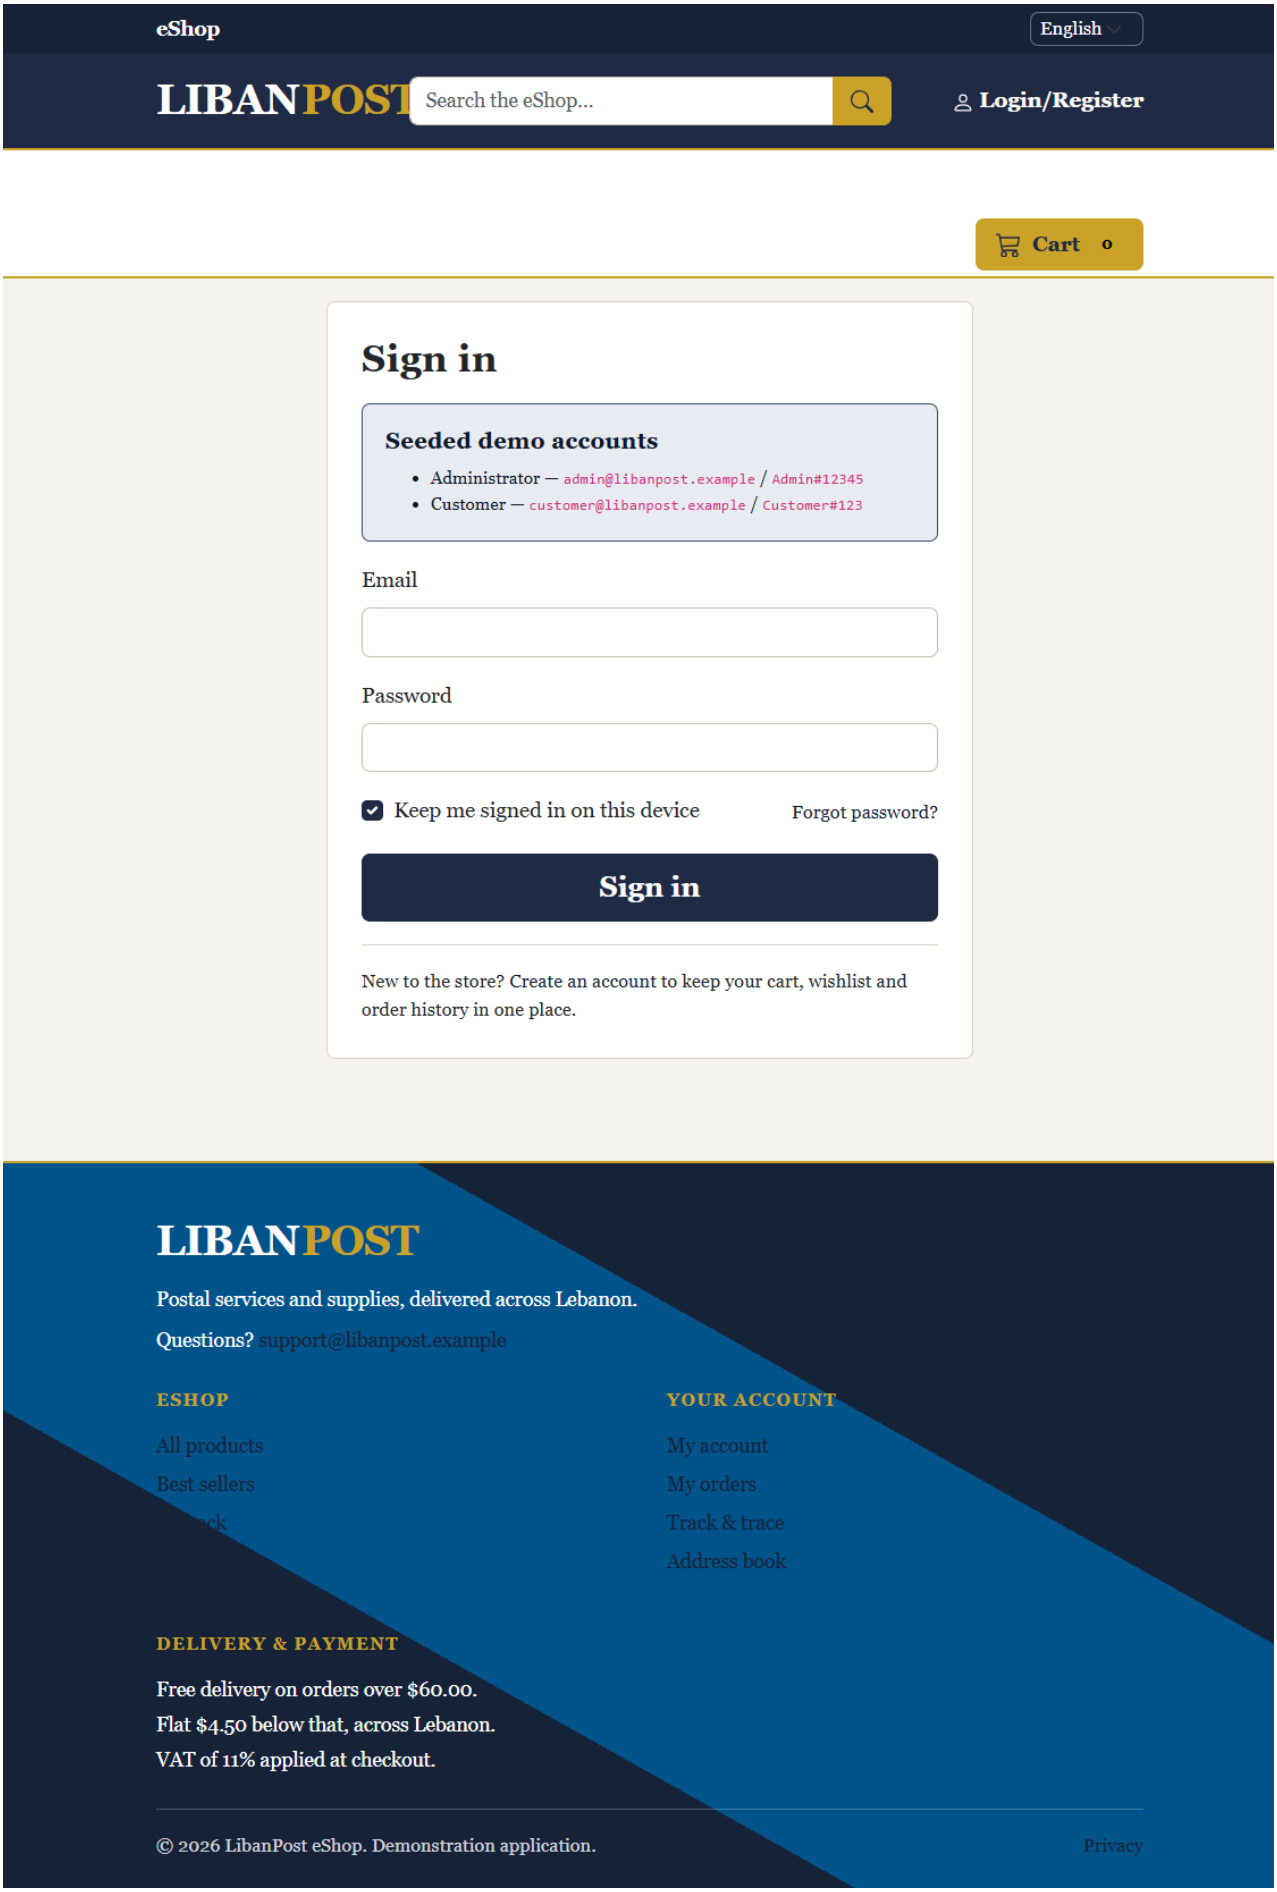

Wishlist

Empty state shown here: "Tap Save to wishlist on any product page". Each saved row carries current price/stock and an add-to-cart button; entries are removed with the remove button.

Fields: **Email** (required, valid email), **Password** (required), **Keep me signed in** (checked by default), plus a **ReturnUrl** hidden field so redirected users land back where they started. The demo helpfully lists the seeded accounts.

Register

Fields: **Full name** (≤120), **Email** (unique per store), **Phone** (optional), **Password** (8–100 chars, the same rules ASP.NET Identity enforces on the server), **Confirm password**, and a terms acceptance checkbox before **Create account**.

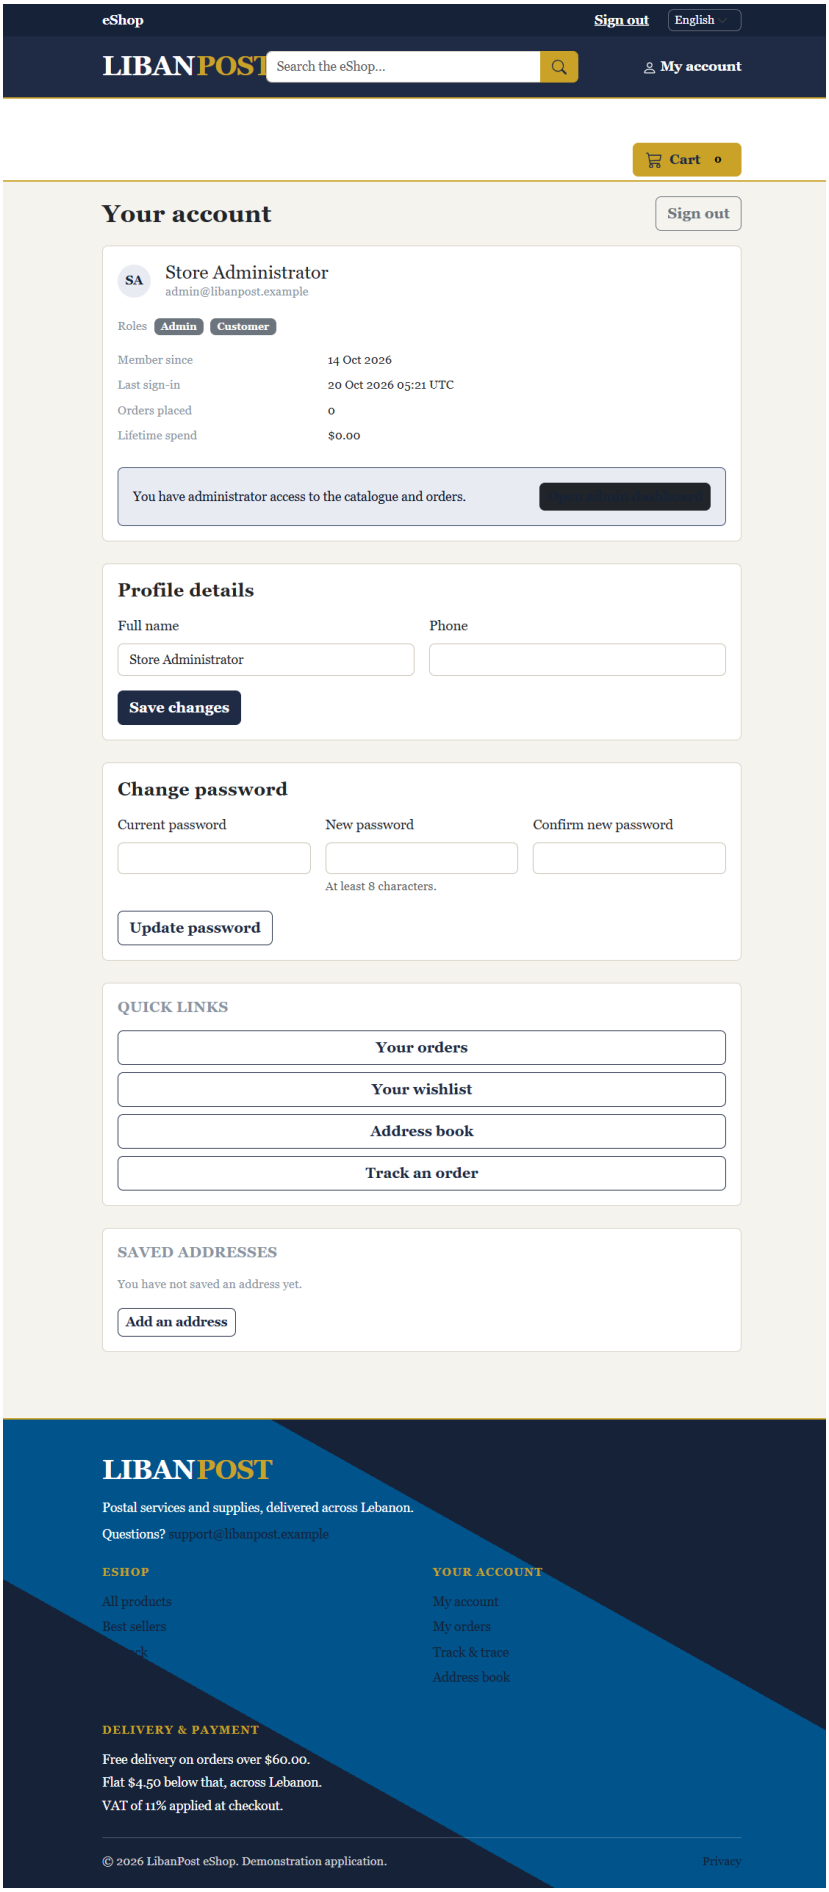

Forgot password — `/Account/ForgotPassword`

Forgot password

Just an **Email** field. The store never reveals whether the address exists — the response is identical either way. With the demo email transport (`Email:Transport: File`) the reset message is written to `App_Data/outbox` and the reset link is there.

Profile

Two forms on one page:

- **Update profile** — display name (≤120) and phone (optional), prefilled from the account.
- **Change password** — current password (must be correct), new password (8–100), and a confirmation that must match.

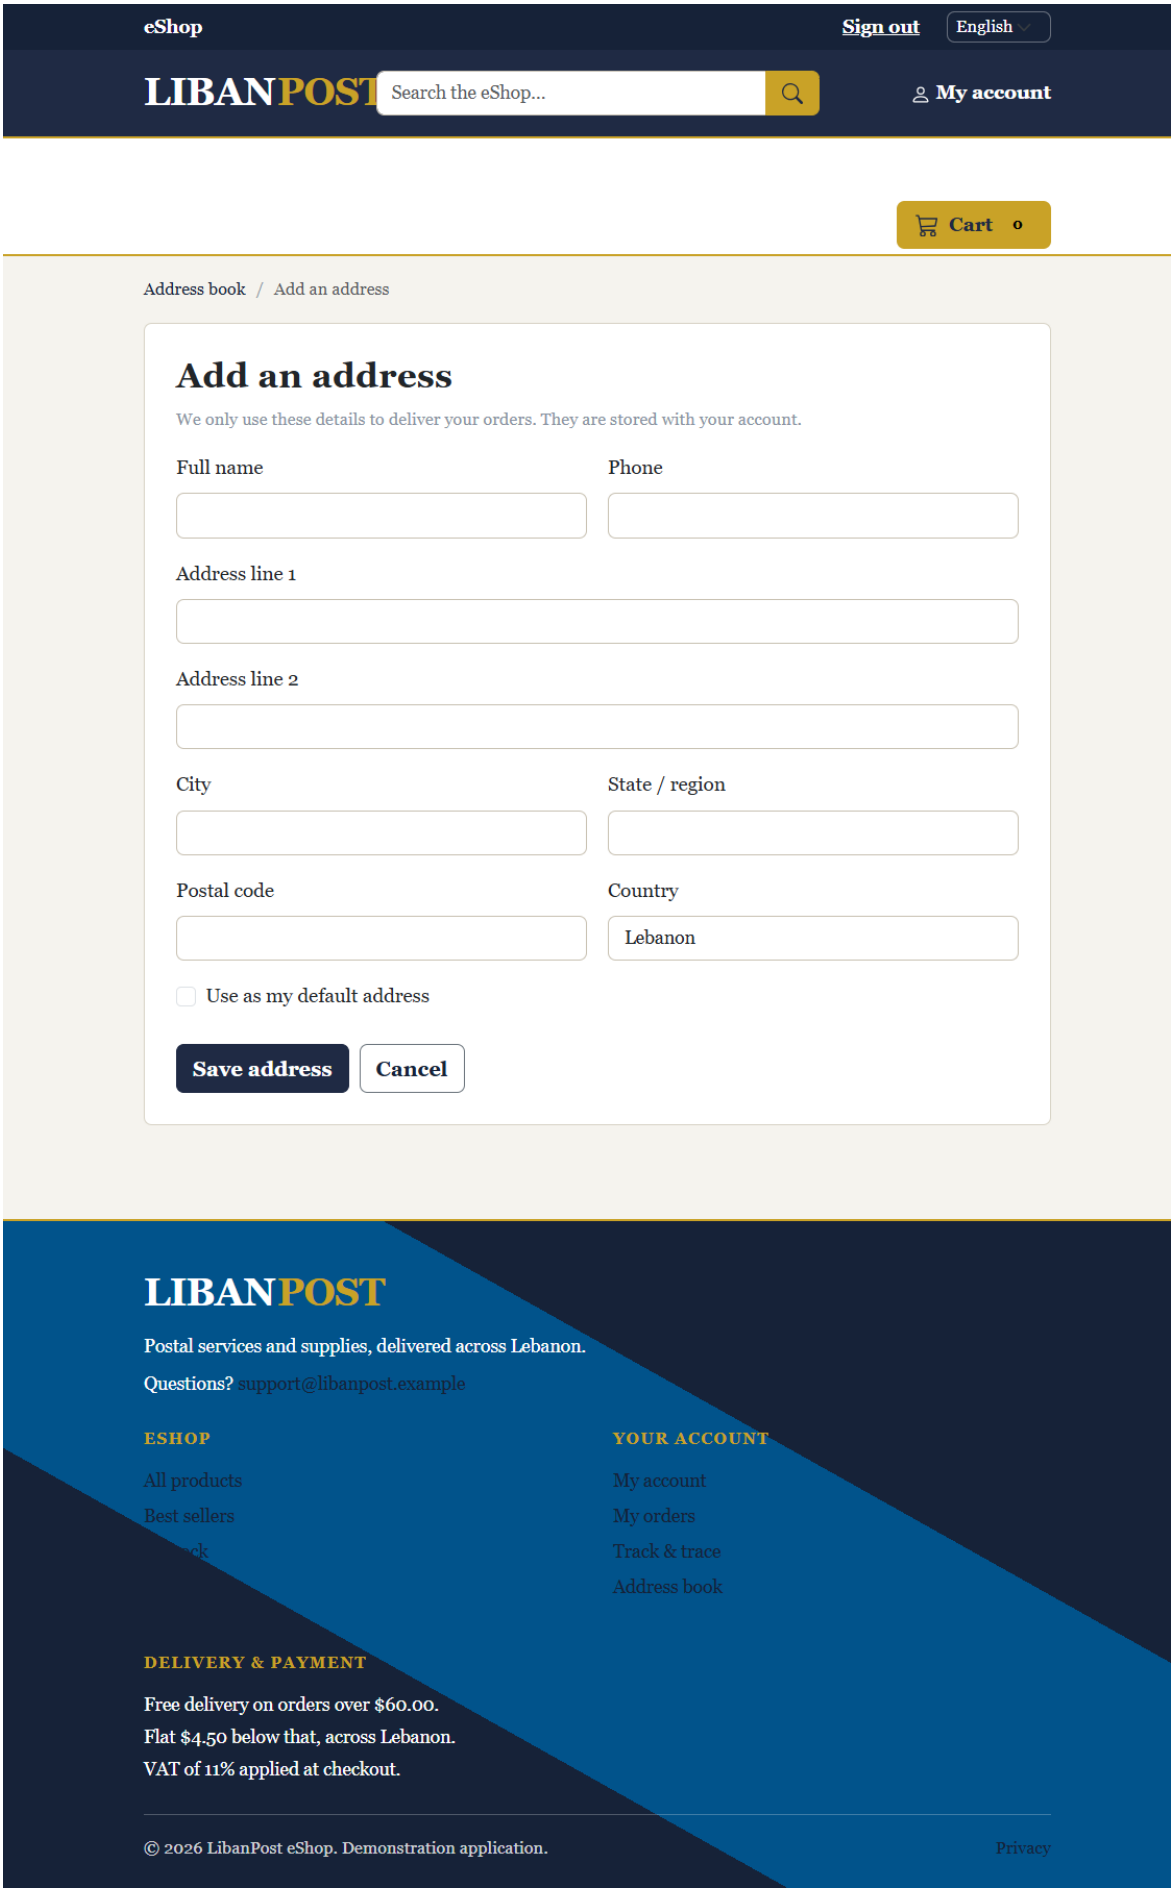

Address book — `/Account/Addresses`

Address book

One card per saved address with **Edit**, **Delete** and **Set default** (POST forms, each with anti-forgery token). The default badge marks the address checkout pre-selects.

Edit an address — `/Account/EditAddress`

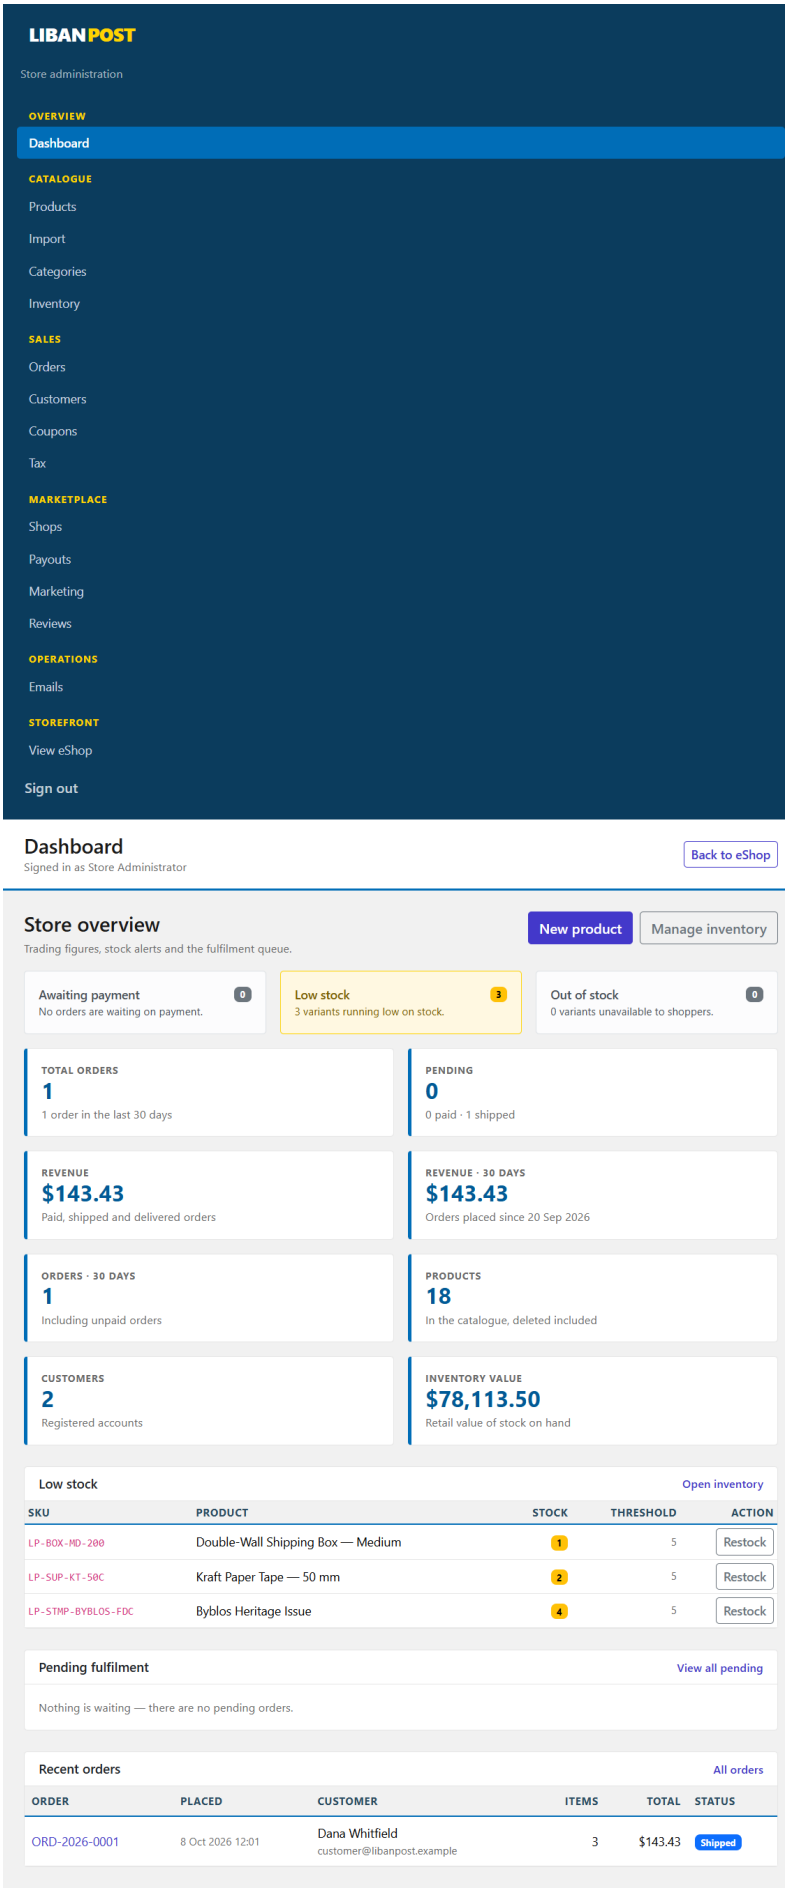

Edit address form

A fresh empty address (the admin demo account had none saved). All the shipping fields from checkout reappear: full name (required), street line 1 (required), optional line 2, city (required), optional region, postal code (required), country (required), optional phone, and a **make this the default** checkbox.

Part 4 — Store administration (`/Admin`)

Admin pages share the dark left-hand navigation; the highlight moves to the current page and there is always a "Back to eShop" link in the header.

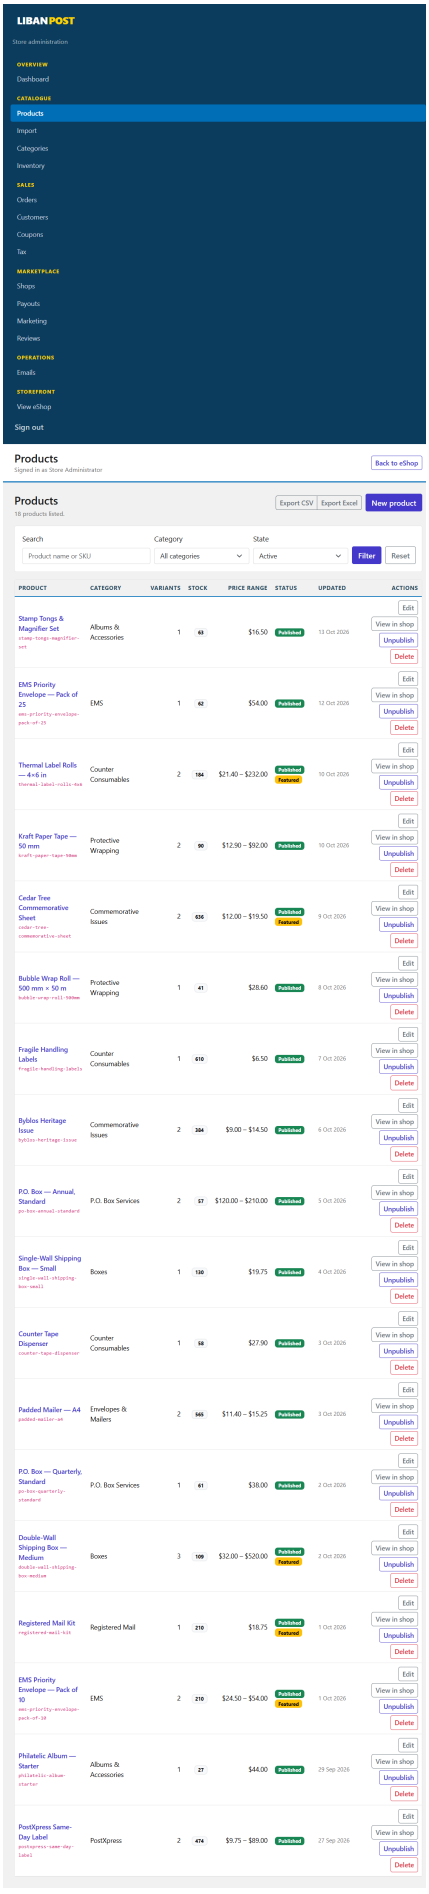

Dashboard — `/Admin`

Admin dashboard

An overview: KPI tiles (revenue, orders, AOV, cancellation rate), a revenue trend strip, the **order funnel** (placed → paid → shipped → delivered), top products, revenue by category with bars, new customers, top customers, payment methods, coupon performance and fast-moving variants. Each block exposes **CSV / Excel** export buttons (GET links, not POSTs).

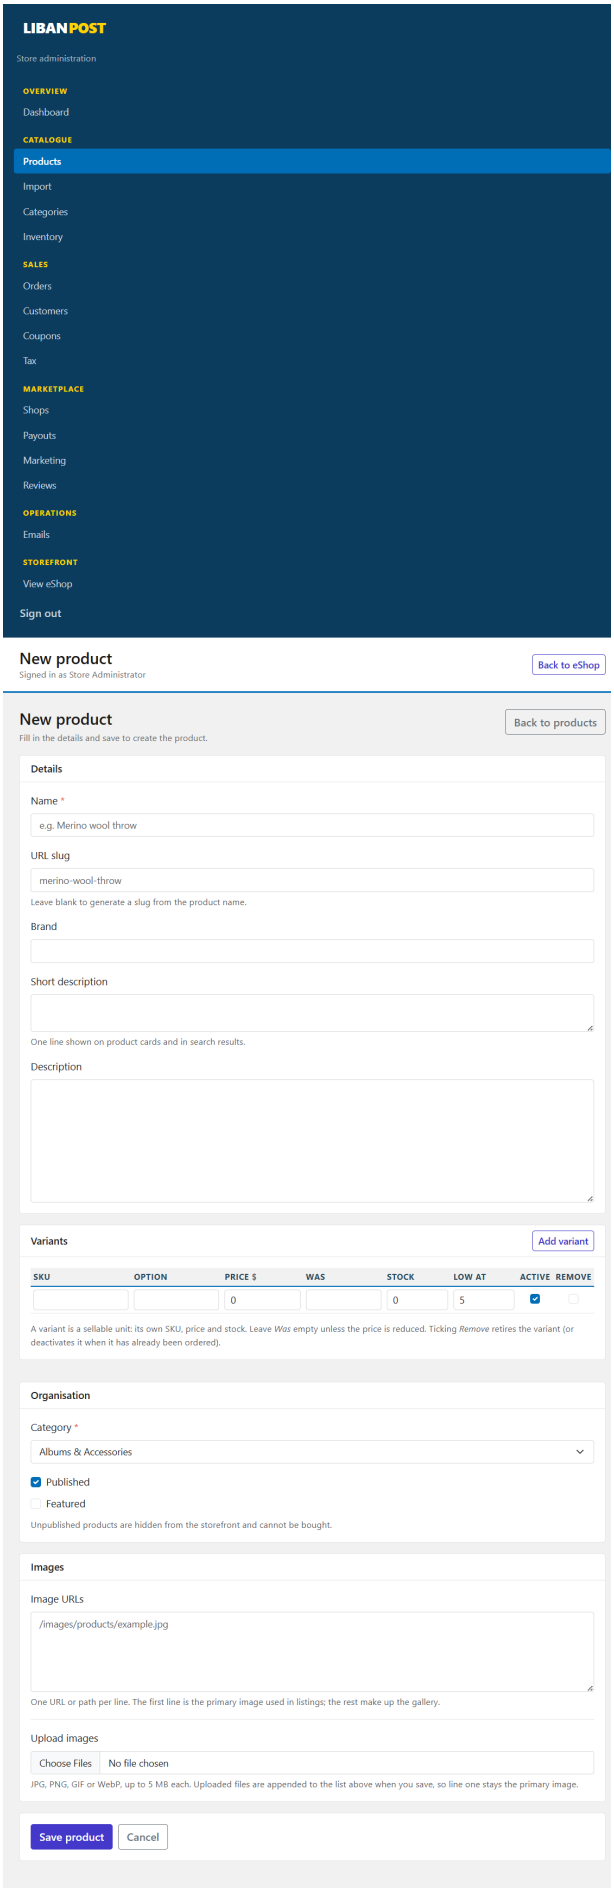

Products — `/Admin/Products`

Admin products

The catalogue grid: product, category, variant count, total stock, price range, status pill (Published / Featured), updated date. Actions per row: **Edit**, **View in shop**, **Unpublish**, **Delete** (all small POST forms; *Delete* is a soft-delete — the product can be restored). The **search/filter** bar (product name or SKU, category dropdown, state dropdown) is a GET form; **Export CSV / Export Excel** links reproduce the current filter.

New product — `/Admin/Products/Create`

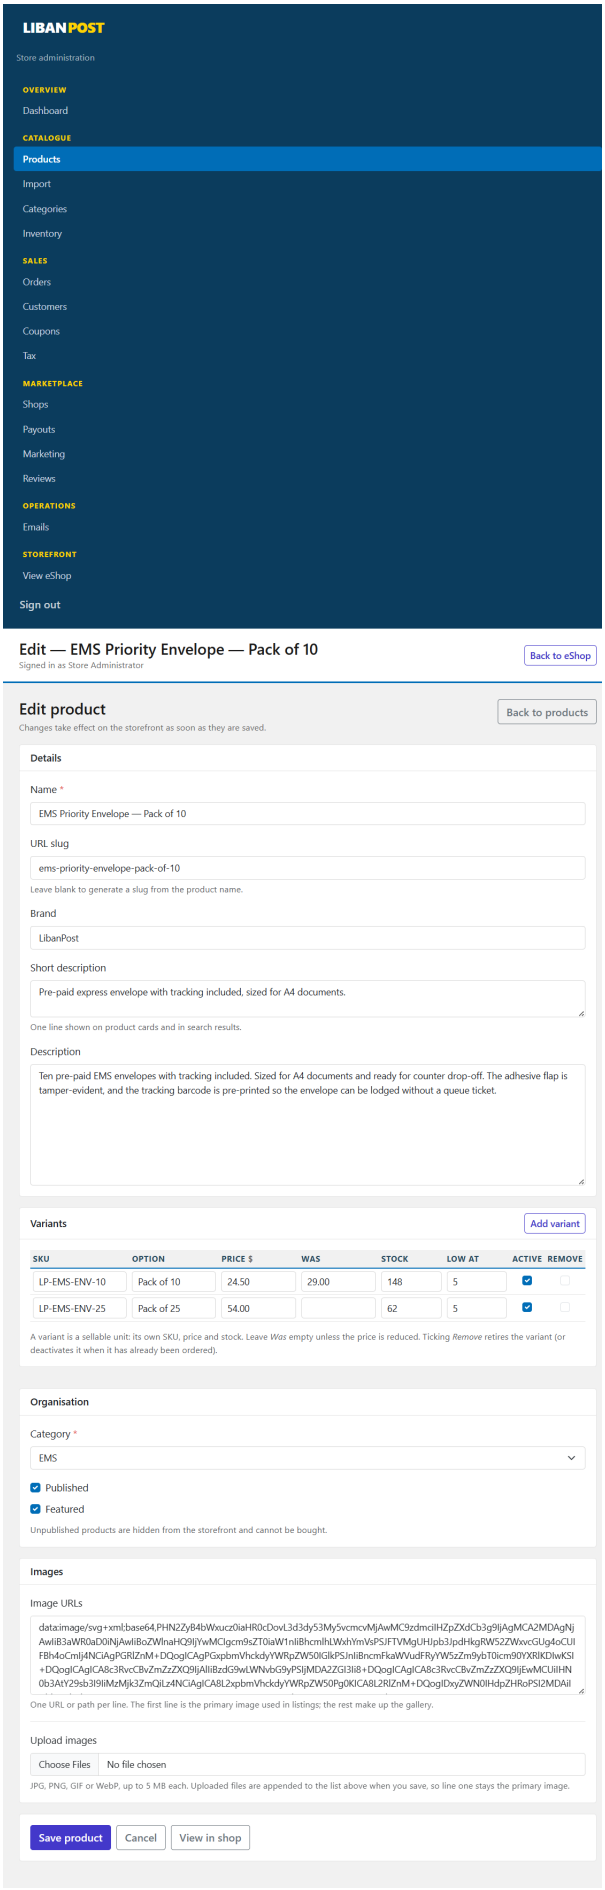

New product form

The product editor (same form as "Edit", with an empty model):

- **Details** — `Name` (required, ≤160), `URL slug` (auto-filled from the name, editable, must stay unique), `Brand`, `Short description` (≤200 — the card line), `Description` (full text).
- **Variants** — a repeating row: SKU (required, ≤64), option label (e.g. *Pack of 10*), `Price` (>0), `Was` (compare-at price), `Stock`, `Low at` (low-stock threshold, default 5), `Active`, and **Remove** (reduced to *deactivate* if it has already been ordered). **Add variant** clones a new empty row.
- **Organisation** — `Category` (required dropdown), **Published** and **Featured** checkboxes.
- **Images** — one URL/path per line (the first line is the primary image) or a file picker uploading JPG/PNG/GIF/WebP up to 5 MB; uploads append to the URL list on save.
- **Save product** posts everything to `/Admin/Products/Save`; invalid fields come back inline.

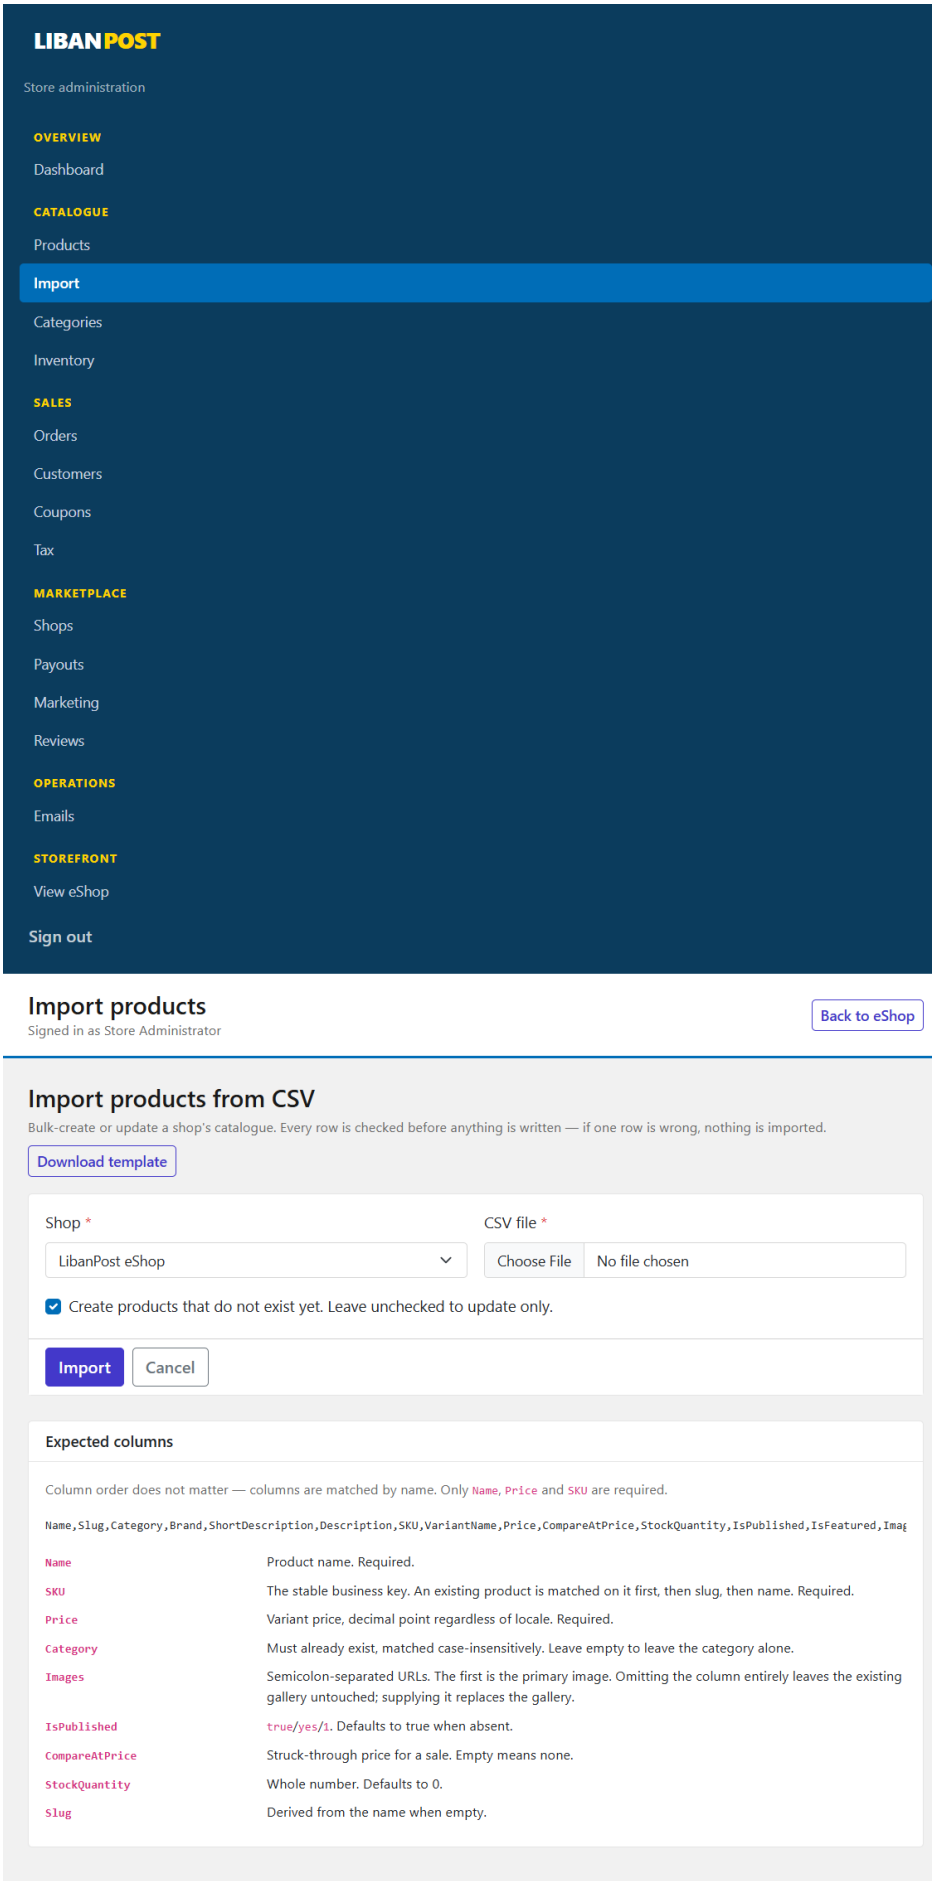

Edit product — `/Admin/Products/Edit/1` (example)

Edit product form

Pre-filled with the existing product *EMS Priority Envelope — Pack of 10*: two variant rows (ENV-10 / ENV-25), attached category, published + featured, and the image list. The image URL line shows the seeded data-URI images the demo uses. Changes go live as soon as they are saved.

Create products that do not exist yet. Leave unchecked to update only.
Import
Cancel
Expected columns
Column order does not matter — columns are matched by name. Only Name, Price and SKU are required.
Name,Slug,Category,Brand,ShortDescription,Description,SKU,VariantName,Price,CompareAtPrice,StockQuantity,IsPublished,IsFeatured,Imag
Name
Product name. Required.
SKU
The stable business key. An existing product is matched on it first, then slug, then name. Required.
Price
Variant price, decimal point regardless of locale. Required.
Category
Must already exist, matched case-insensitively. Leave empty to leave the category alone.
Images
Semicolon-separated URLs. The first is the primary image. Omitting the column entirely leaves the existing gallery untouched; supplying it replaces the gallery.
IsPublished
true/yes/1. Defaults to true when absent.
CompareAtPrice
Struck-through price for a sale. Empty means none.
StockQuantity
Whole number. Defaults to 0.
Slug
Derived from the name when empty.

Import page

Form: **Shop** (dropdown of shops — required), **CSV file** (required; format checked and every row validated before *anything* is written — an all-or-nothing import), and **Create products that do not exist yet** (uncheck for update-only). **Download template** writes the exact header row. The expected-columns table documents each field; only `Name`, `Price` and `SKU` are required.

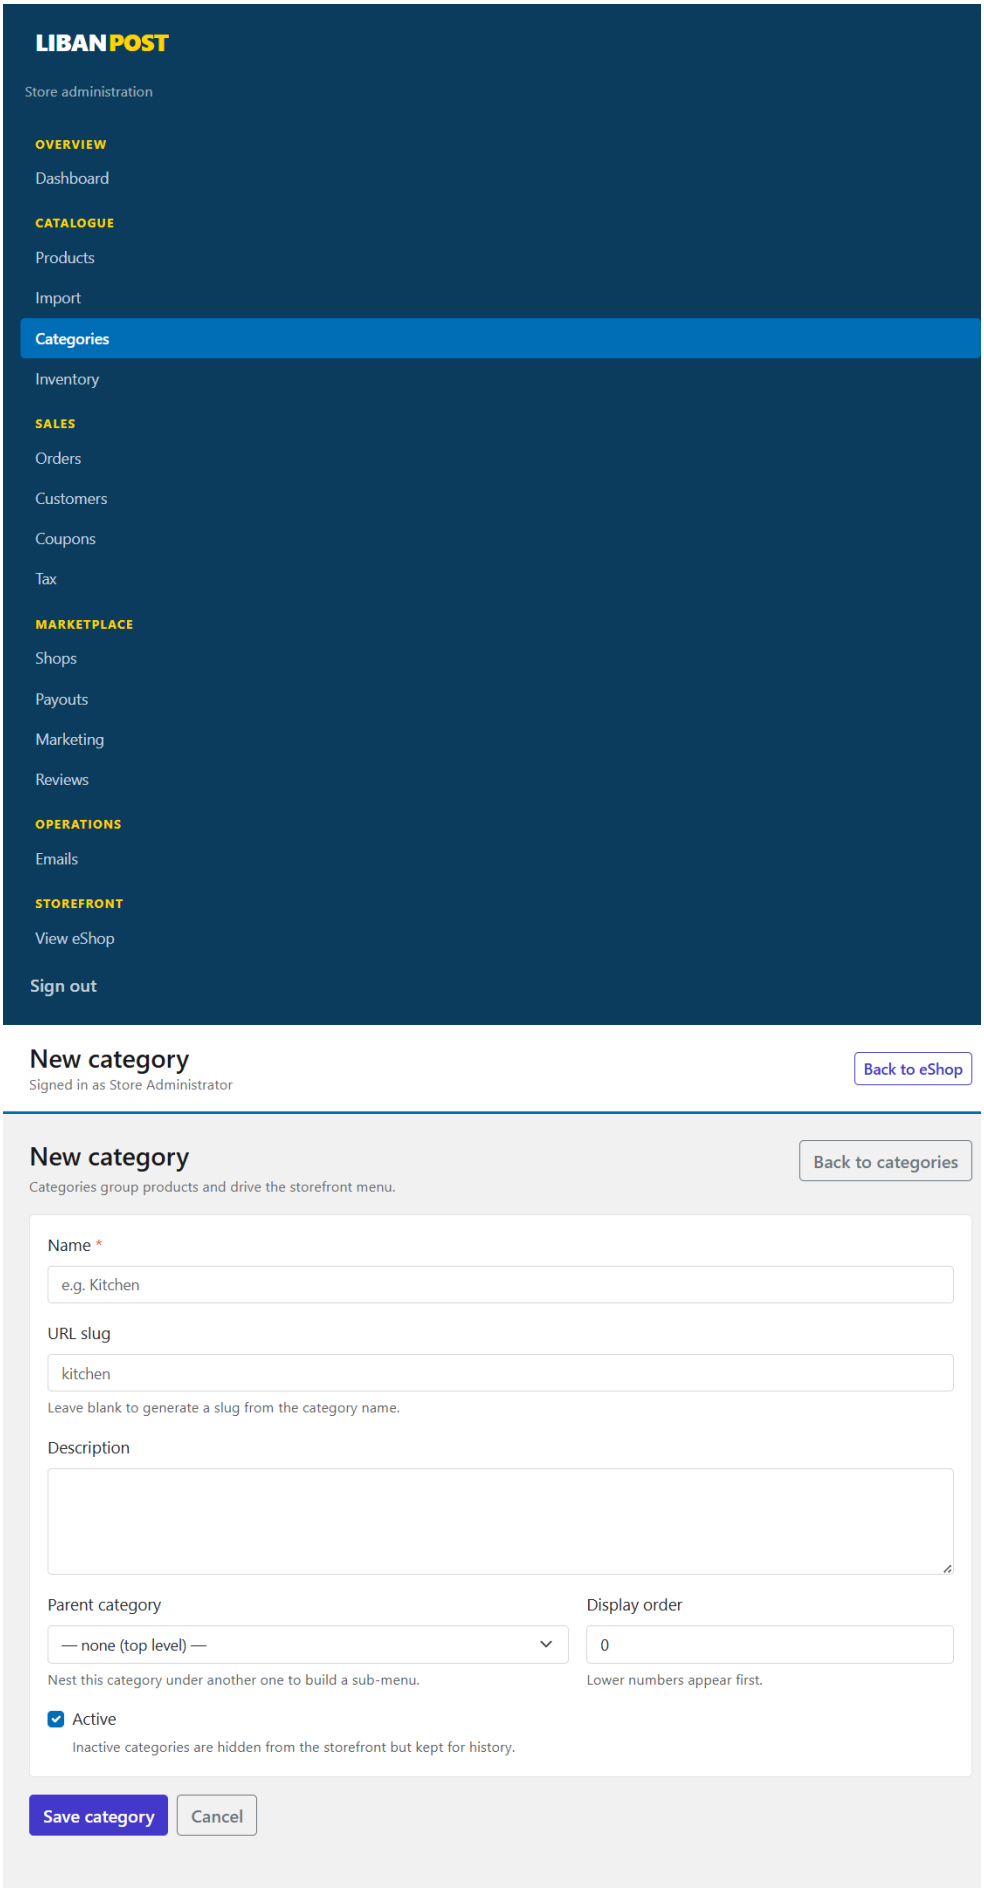

Categories — `/Admin/Categories`

Categories tree

A nested tree (15 categories in the seed) with per-row **Edit**, **Add sub-category**, **Delete** (guarded — a category with products can be hidden but not deleted), display order and an Active pill. **New category** opens the editor.

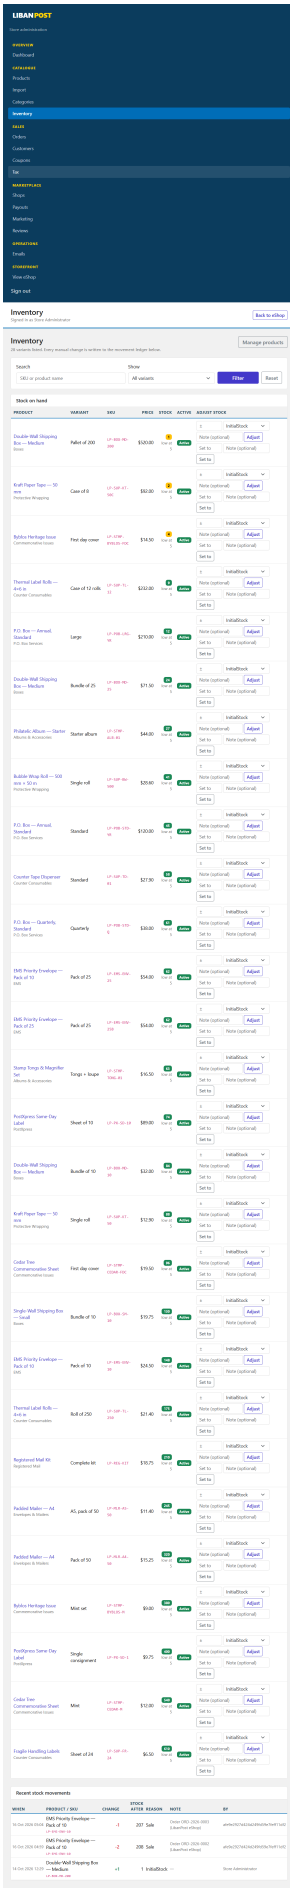

New / edit category — `/Admin/Categories/Create`

Category form

Fields: `Name` (required, ≤80), `URL slug` (auto-generated when blank), `Description` (≤500), **Parent category** dropdown ("none (top level)"), **Display order** (lower numbers first), **Active** checkbox. Parent cycles are prevented on save.

Inventory

29 variants listed with stock levels (low stock highlighted in amber). Two adjustment forms per row:

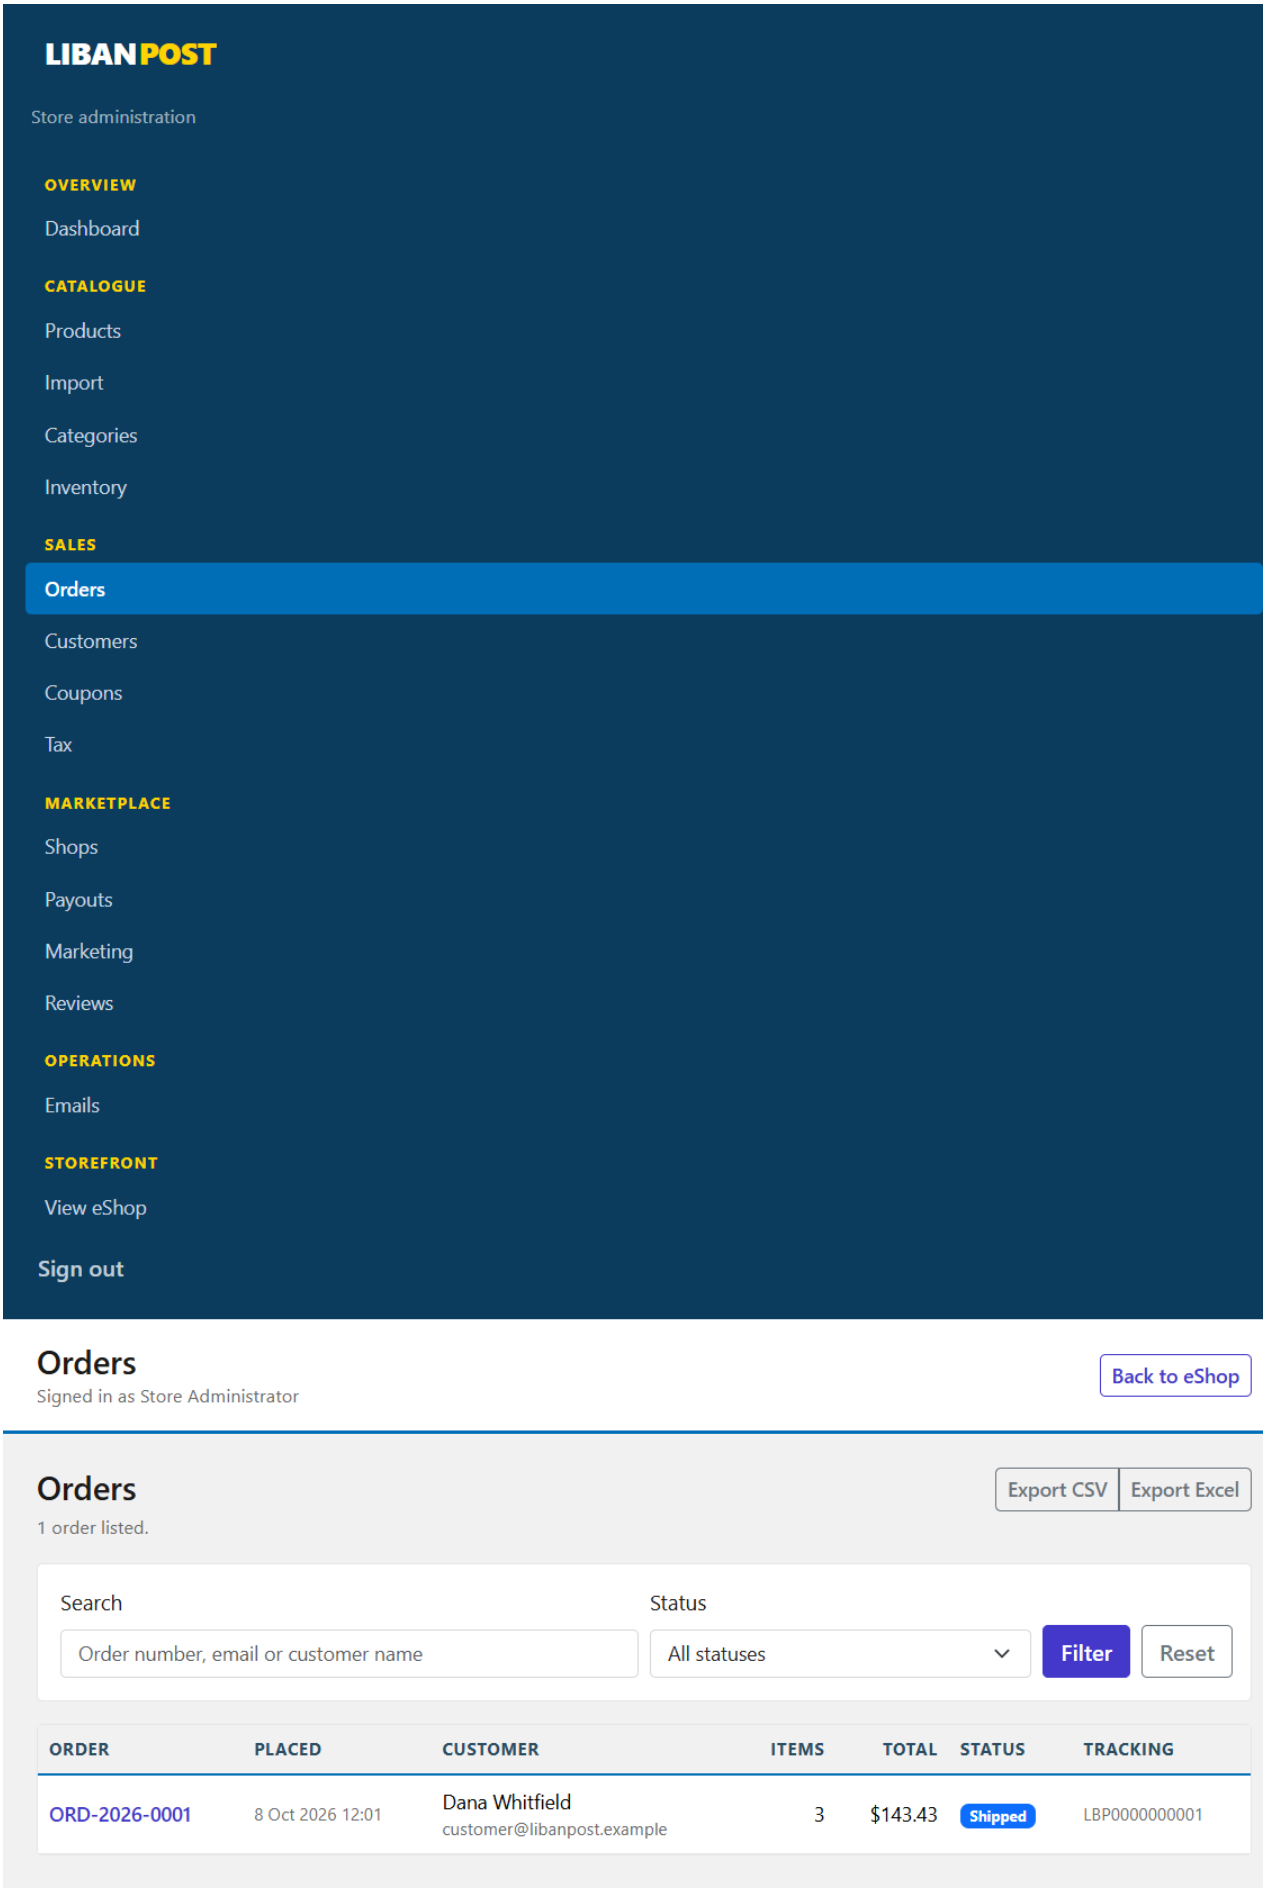

- **Adjust stock (–/+)** — `Adjust by` (signed int), optional `Note`, applying a signed

delta; every movement is journalled.

- **Set** — a `set to` box and note to pin the absolute count.

At the bottom, **Recent stock movements** logs every change with product, delta, resulting level, reason and who made it.

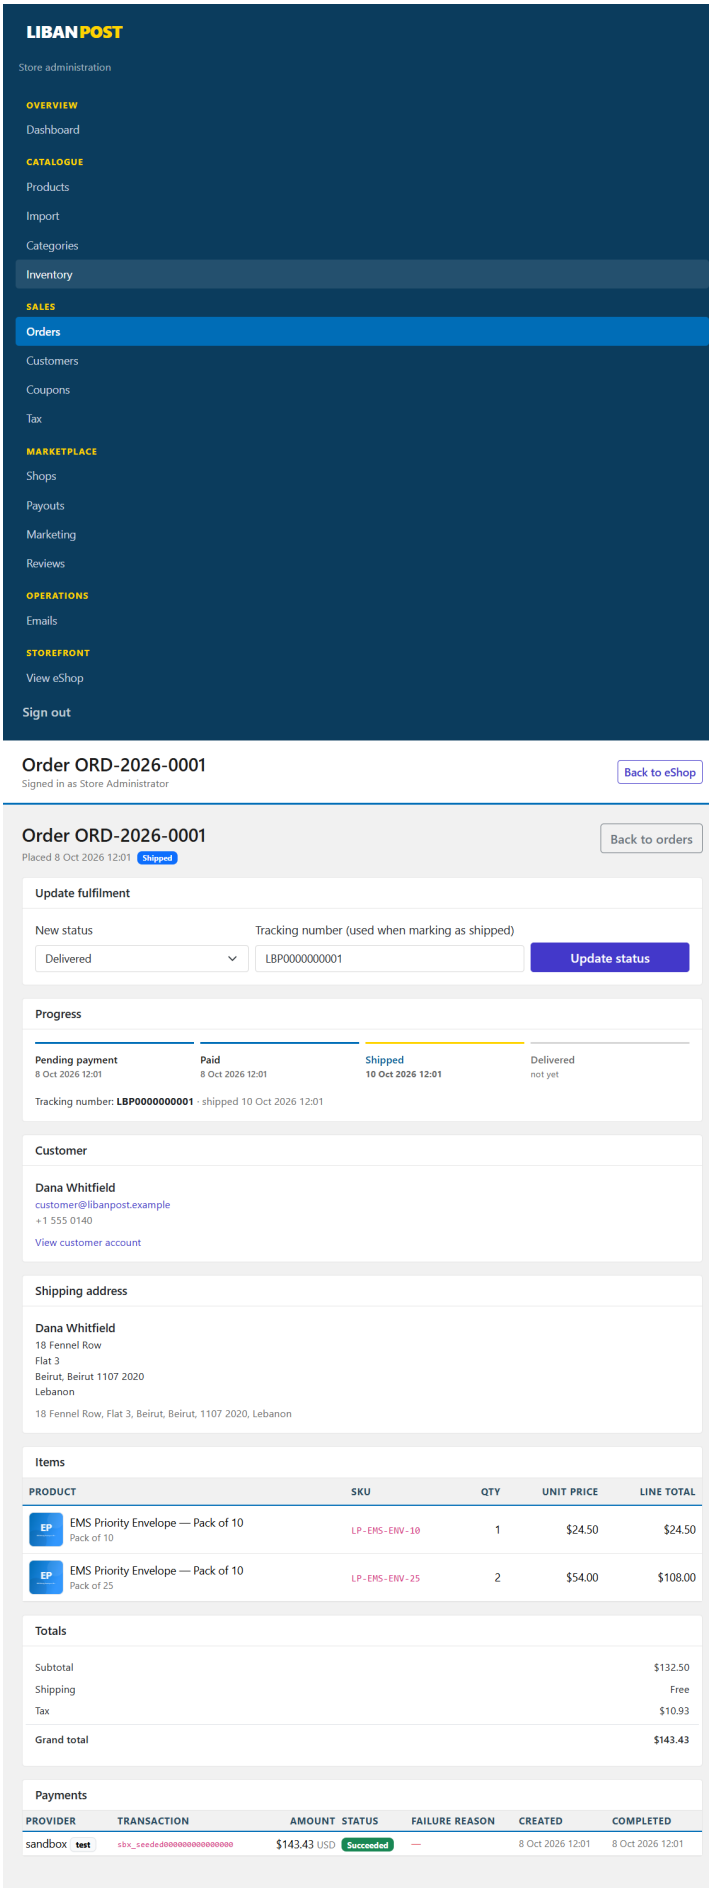

Orders — `/Admin/Orders`

Admin orders

Filter bar (search — order number/email/customer; status dropdown) plus Export CSV/Excel. Rows show order, placed, customer, items, total, status badge and tracking number. Click the number to manage the order.

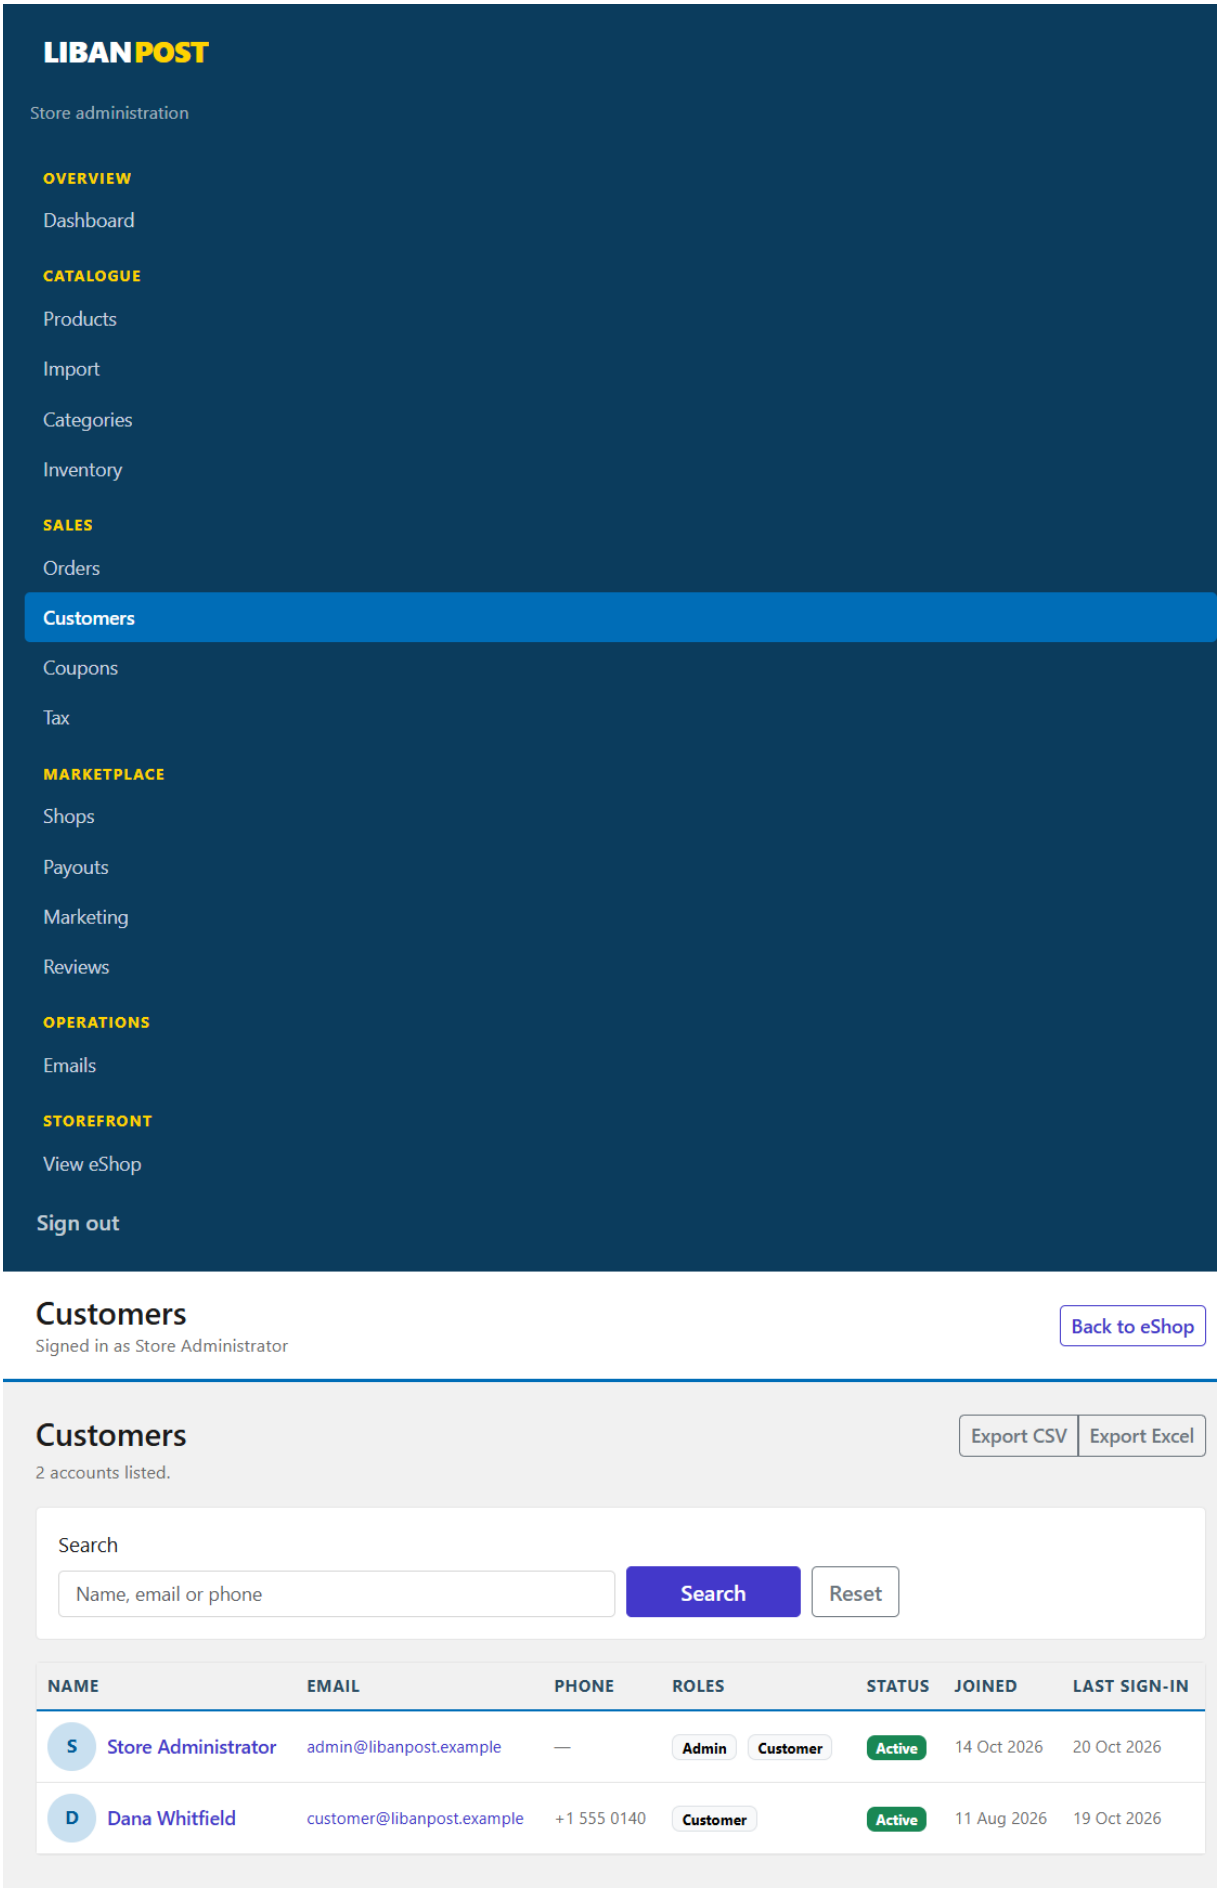

Order detail (admin) — `/Admin/Orders/Details/{id}`

Admin order details

- **Update fulfilment** — `New status` dropdown (only legal transitions are offered by the state machine) and a `Tracking number` box used when choosing *Shipped*.
- Read-only blocks: progress timeline, customer card (link to the customer's account), shipping address, item lines (SKU, qty, unit price, line total), totals (subtotal, shipping, **tax**, grand total) and **payments** with transaction id, amount and status.

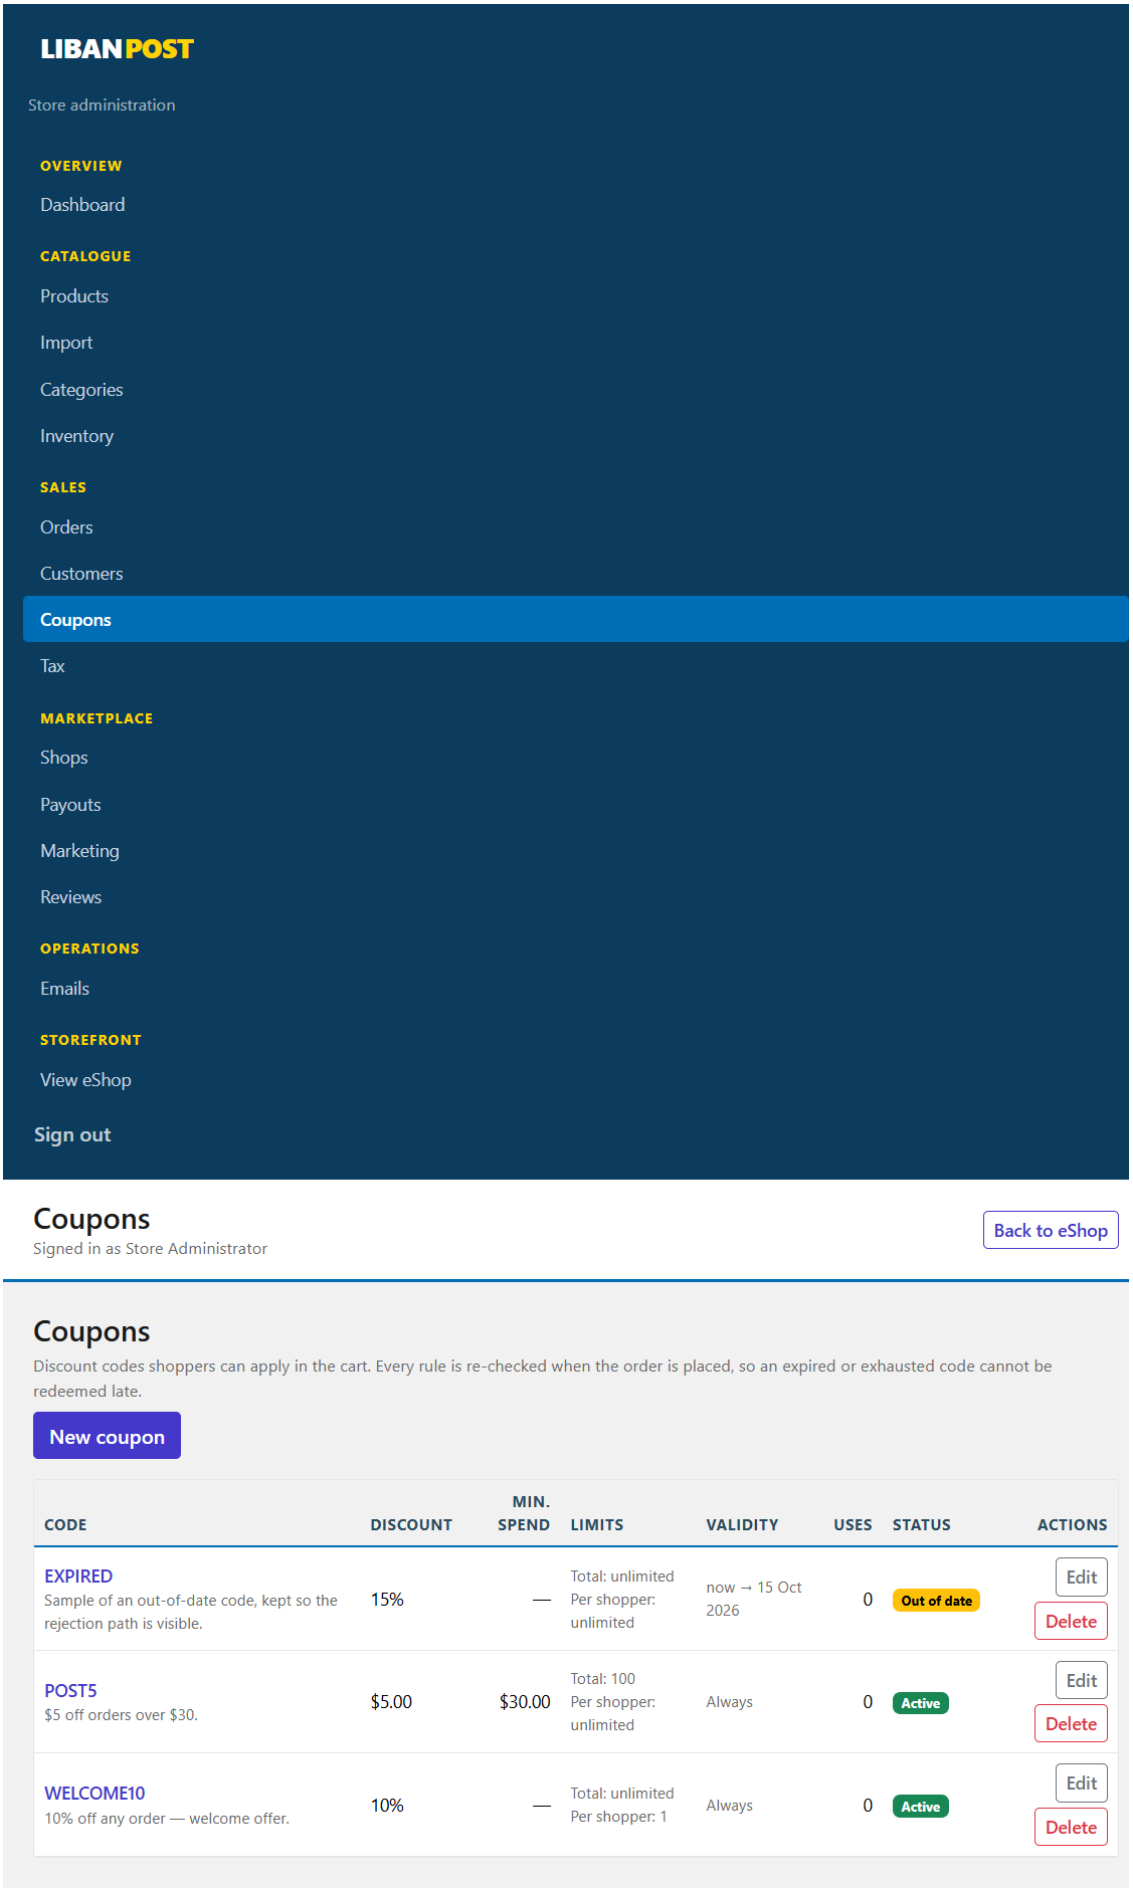

Customers — `/Admin/Customers`

Admin customers

Search box plus role/status badges per account, joined and last sign-in dates, and Export buttons. Each name links to **Details** (`/Admin/Customers/Details/{id}`) with lifetime spend and order history; from there a customer can be deactivated/reactivated (a hidden `isActive` POST form).

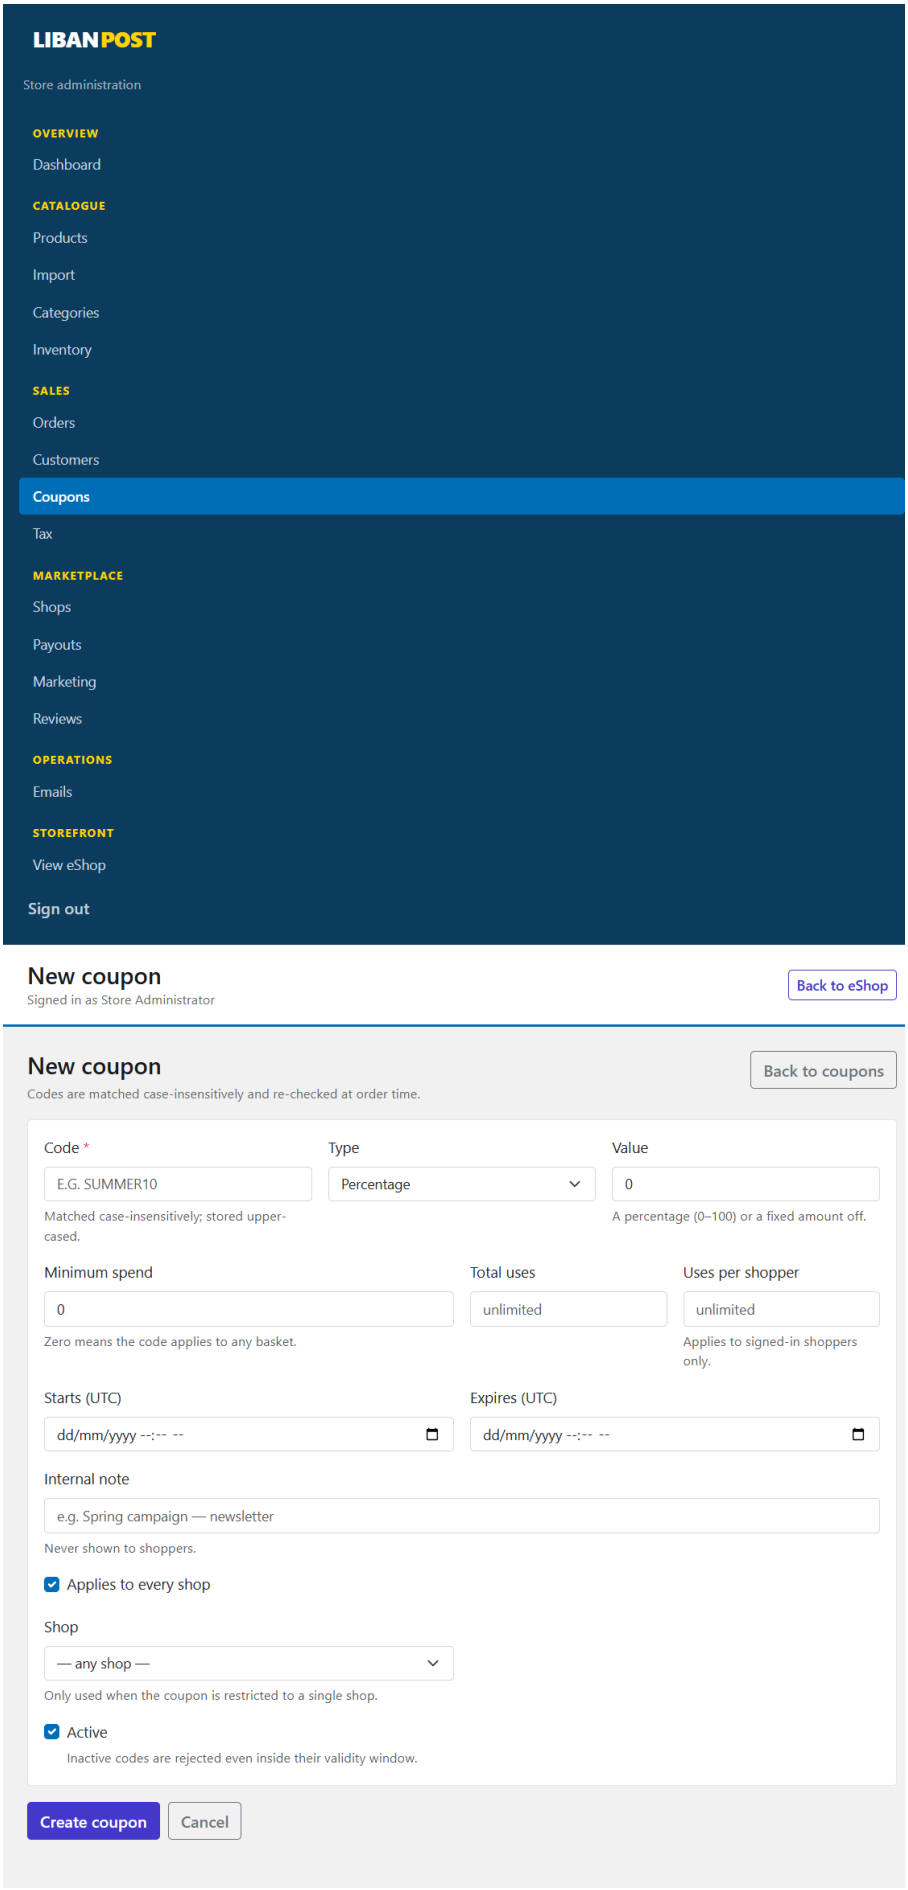

Coupons — `/Admin/Coupons`

Coupons list

One row per code: discount (percent or amount), minimum spend, limits (total uses / per shopper), validity window, uses so far and a status pill (the seeded `EXPIRED` code shows *Out of date*). **Edit** opens the same form as below; **Delete** is a guarded POST.

Add a class
Name *
Rate as a fraction
0.11
0.11 means eleven percent. A percentage typed here as 11 would be rejected.
Exempt — always zero, whatever the rate says
Create class
18 live product(s) are not on a class and are taxed at the store rate. Assign a class on the product editor to move a product onto a different rate.

Tax classes

- **Defined classes** — name, rate, product count, state, and **Delete** (refuses when products still reference the class).
- **Add a class** — `Name` and `Rate as a fraction` (`0.11` = eleven percent; typing `11` is rejected) plus an **Exempt** checkbox that forces zero.
- The store rate (11 %) applies to products with no class; the warning strip counts the live products not on any class.

Suspend

Admin shops

One row per shop: status, owner, and commission. From here an administrator can approve a new vendor (setting the commission percentage) or **Suspend** a shop (a hidden reason is recorded; suspended shops cannot sell).

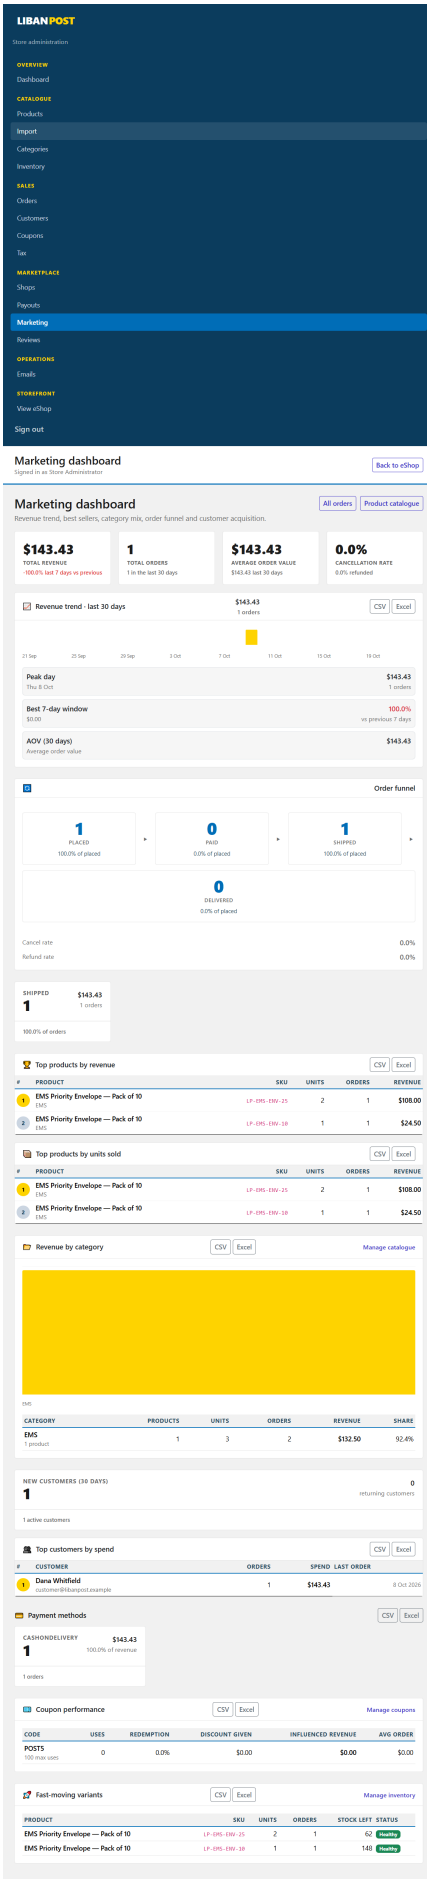

Payouts (marketplace) — `/Admin/Payouts`

Admin payouts

- **Outstanding balances** — per approved shop: unsettled entries, gross, commission, owed, and a **Create payout** form (method + note) when above the configured minimum.
- **Settlement history** — every past payout with reference, period, gross / commission / net, and downloadable statements.

Marketing

Revenue trend, order funnel, best■selling and top■revenue products, revenue by category, new/active customers, top customers by spend, payment-method split, **coupon performance** (uses, redemption rate, discount given, influenced revenue, avg order) and fast-moving variants — each block with its own CSV/Excel export.

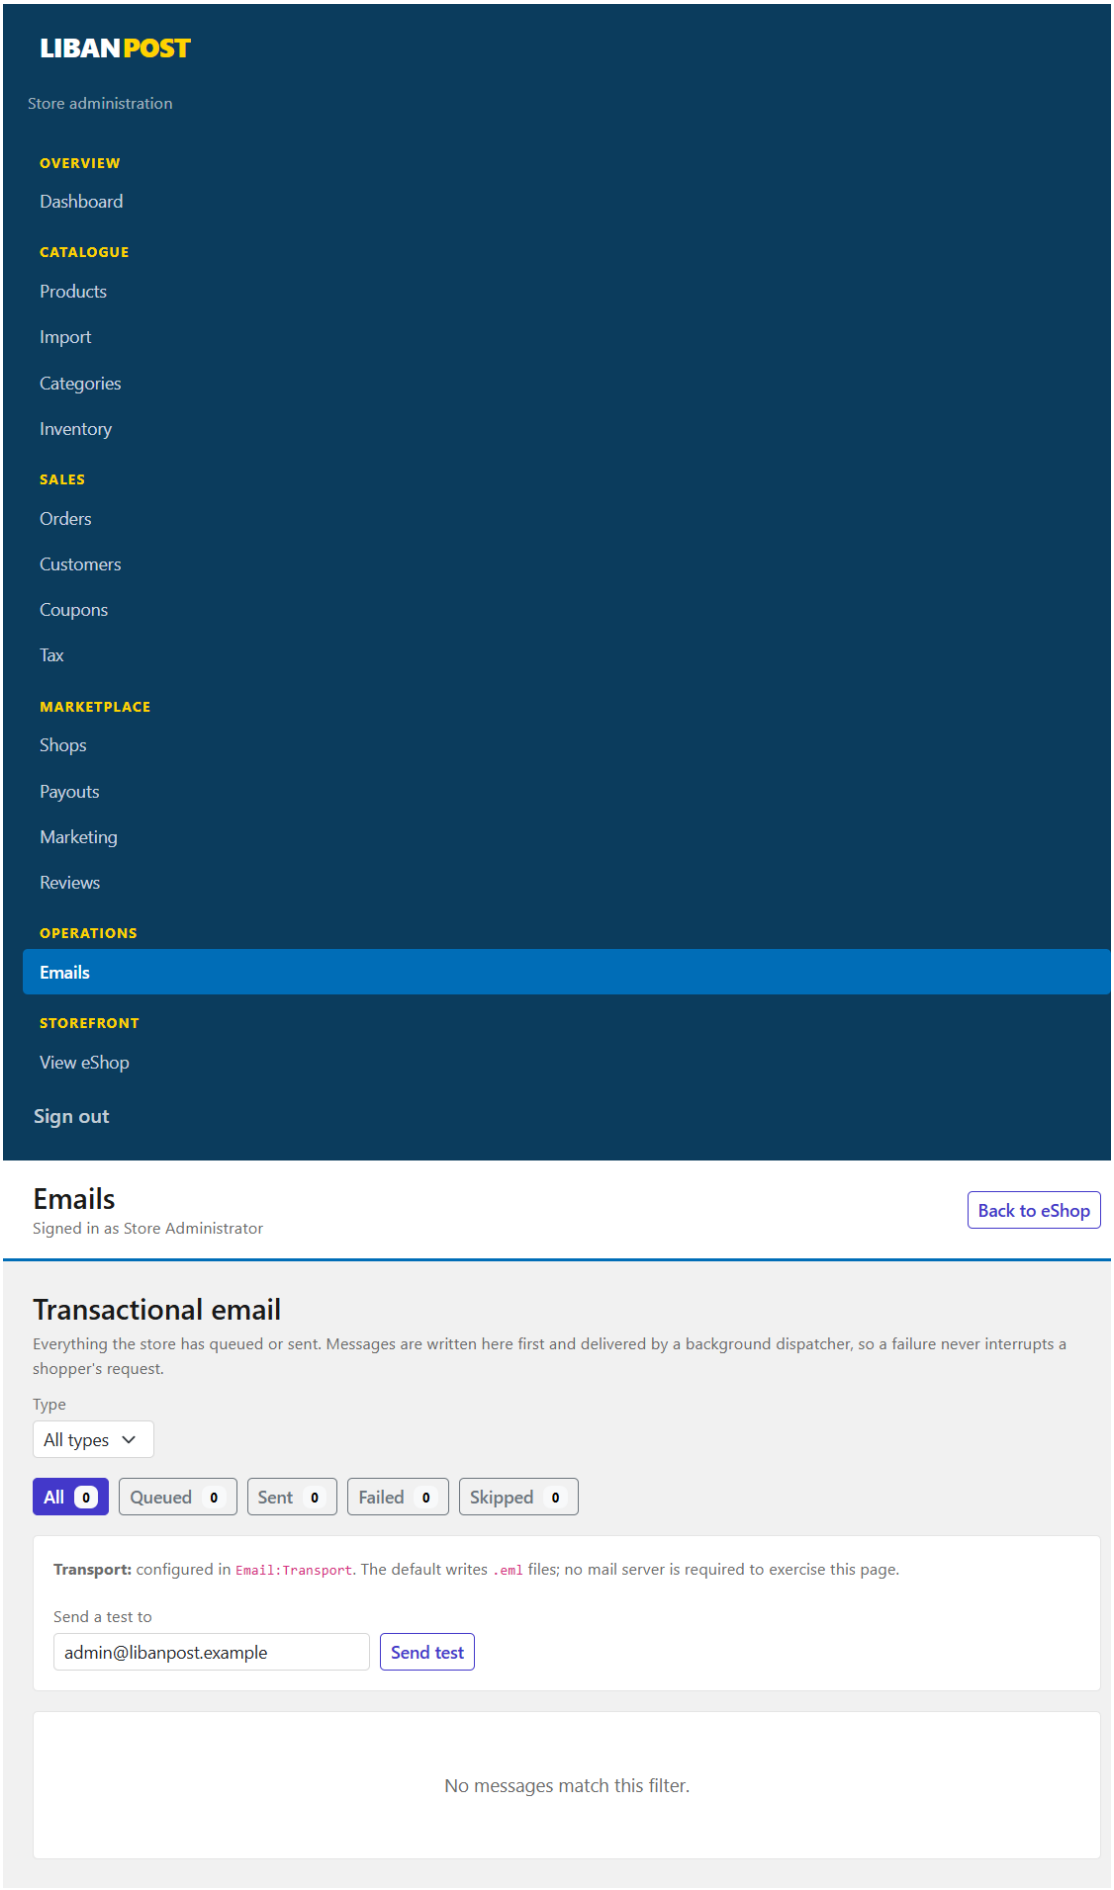

Reviews moderation — `/Admin/Reviews`

Admin reviews

Rating filter dropdown plus status tabs (All / Pending / Published / Rejected with counts). Each review shows product, stars, title, body, reviewer, **Verified purchase** badge, status, and actions: **Queue** → **Publish/Hide** (`Set Status` POST) and **Delete**.

Transactional email — `/Admin/Emails`

Transactional email
Everything the store has queued or sent. Messages are written here first and delivered by a background dispatcher, so a failure never interrupts a shopper's request.
Type
All types
All 0
Queued 0
Sent 0
Failed 0
Skipped 0
Transport: configured in Email:Transport. The default writes .eml files; no mail server is required to exercise this page.
Send a test to
admin@libanpost.example
Send test
No messages match this filter.

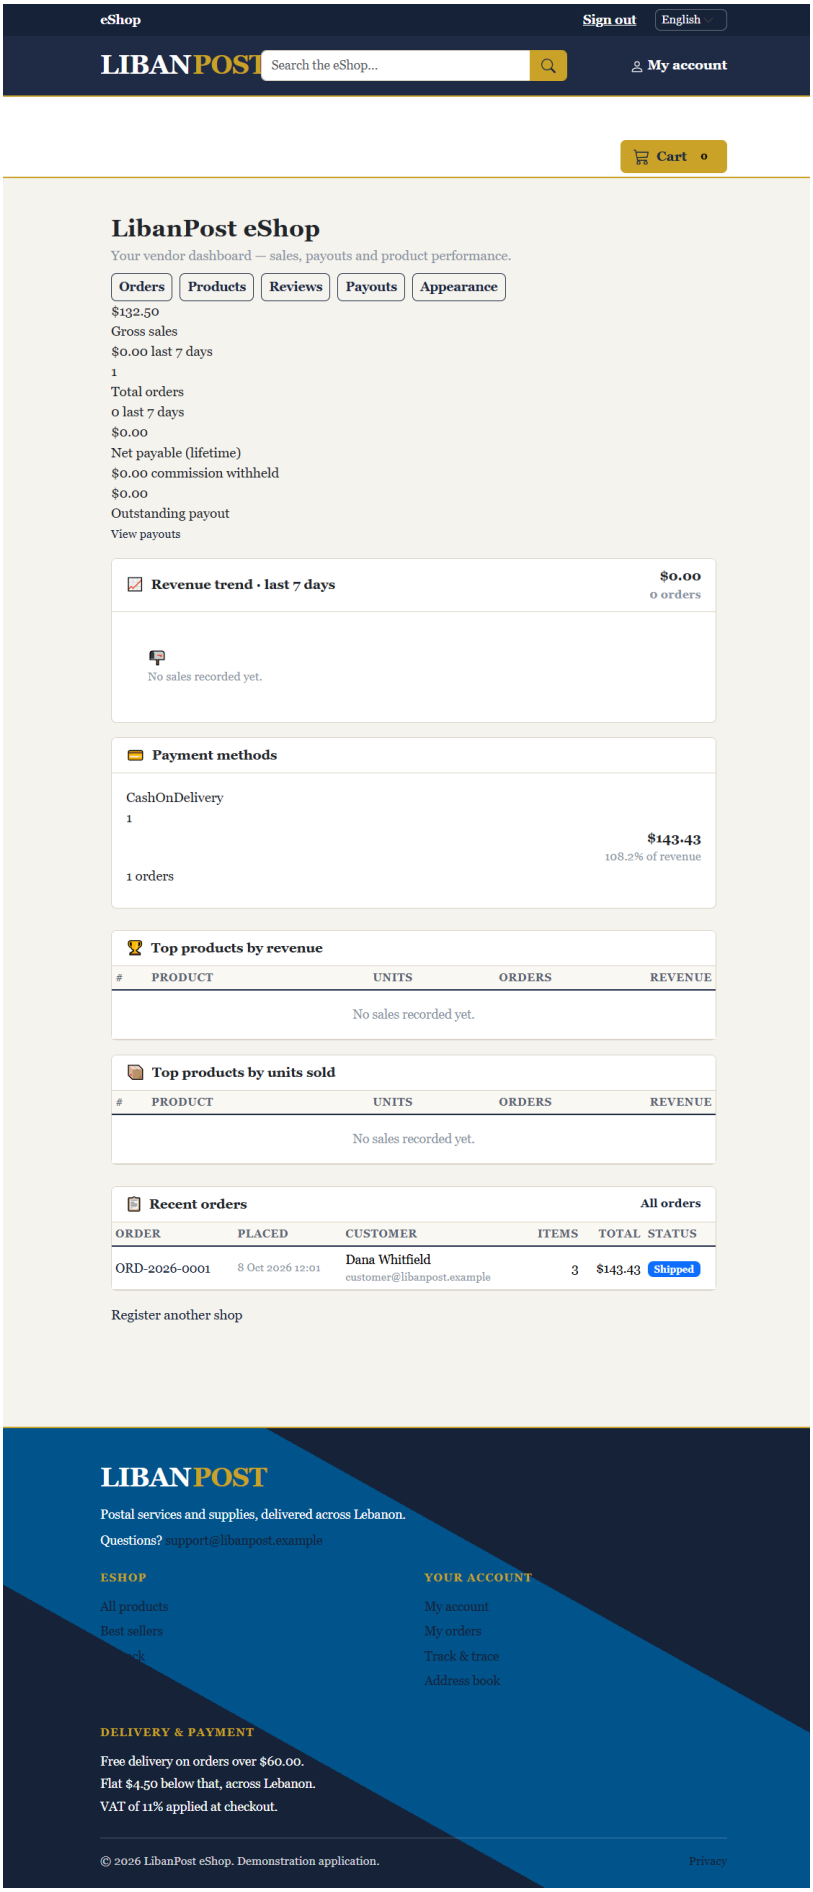

Emails

Type filter, status tabs (Queued / Sent / Failed / Skipped), the audit list of everything the store has queued or delivered, and a **Send a test to** box that queues a test message. With the demo *file* transport, `.eml`/`.html` copies land in `App_Data/outbox`; switch to SMTP in `appsettings.json` to deliver for real.

Part 5 — Vendor area (`/Vendor`)

Vendor pages render inside the shop's own template theme (blonde serif styling in these captures), not the admin chrome — the seller sees their storefront identity.

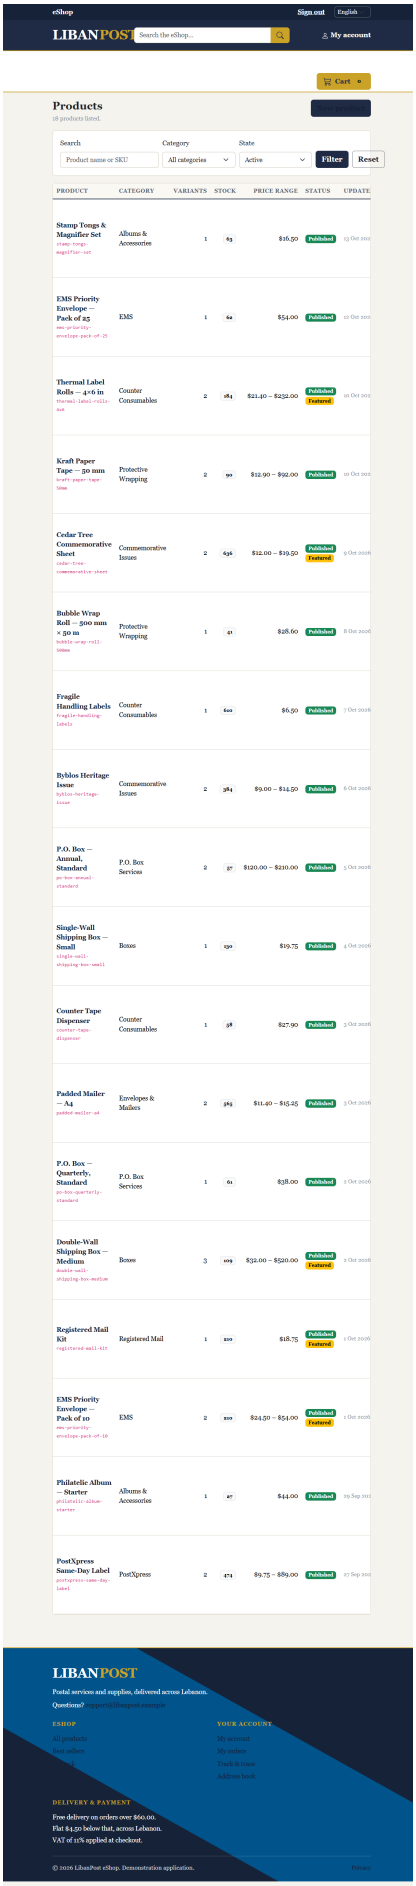

Dashboard — `/Vendor`

Vendor dashboard

Greeting plus sales summary (gross sales, total orders, net payable, commission withheld, outstanding payout) and **View payouts**. Blocks: revenue trend (7 days), payment-method split (cash on delivery in this seed), top products, and **Recent orders** with status badges. **Register another shop** is offered to vendors allowed to run multiple shops.

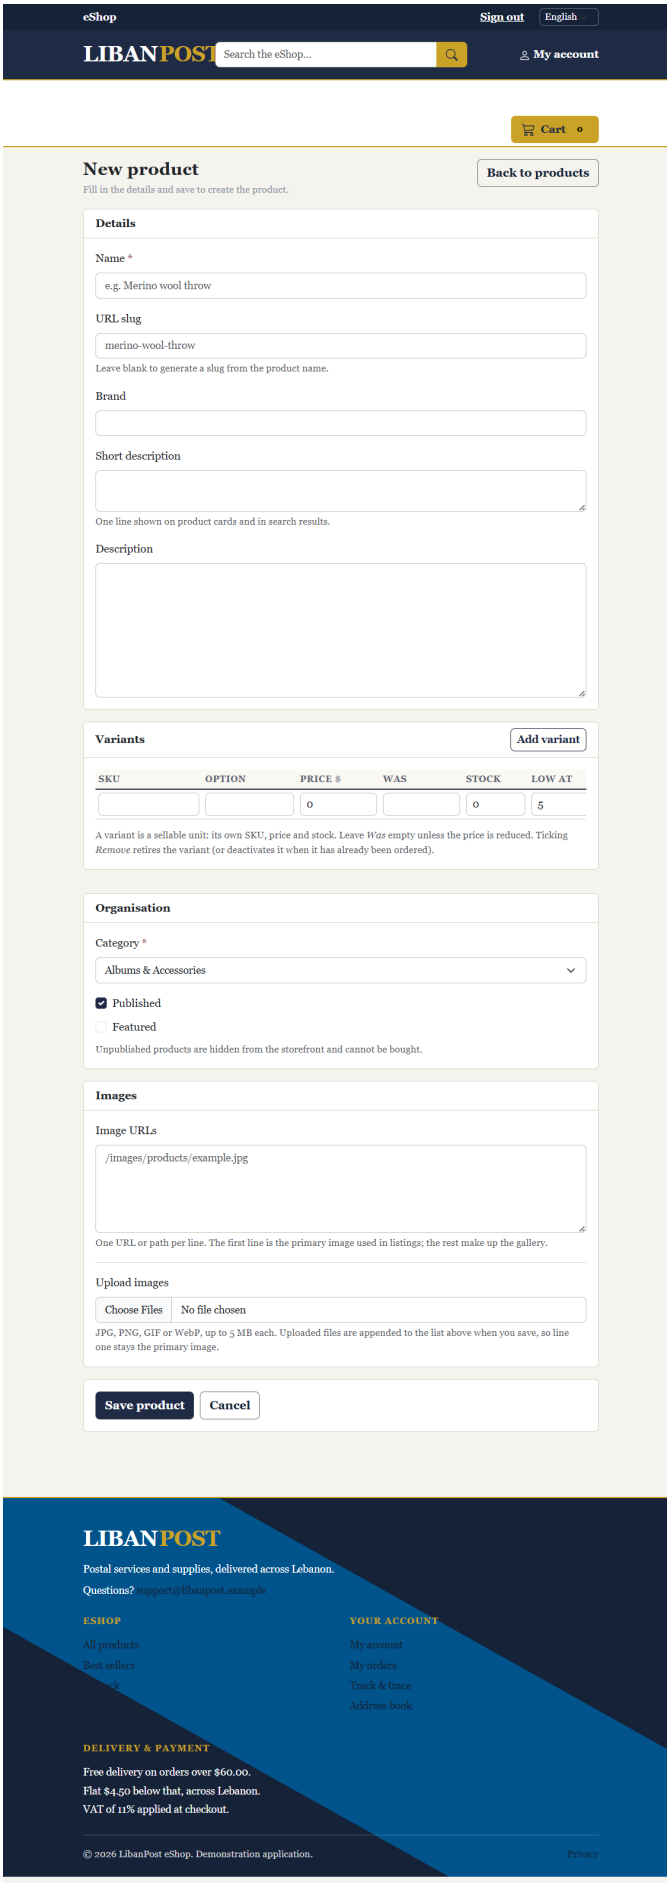

Products — `/Vendor/Products`

Vendor products

The same catalogue grid as the admin page, but every product belongs to the signed-in shop; the same search/state filter form, publish/unpublish/edit/delete actions and stock pillars. This is the page the *Orders* bug earlier in the project related to — vendors can now list and manage their catalogue safely.

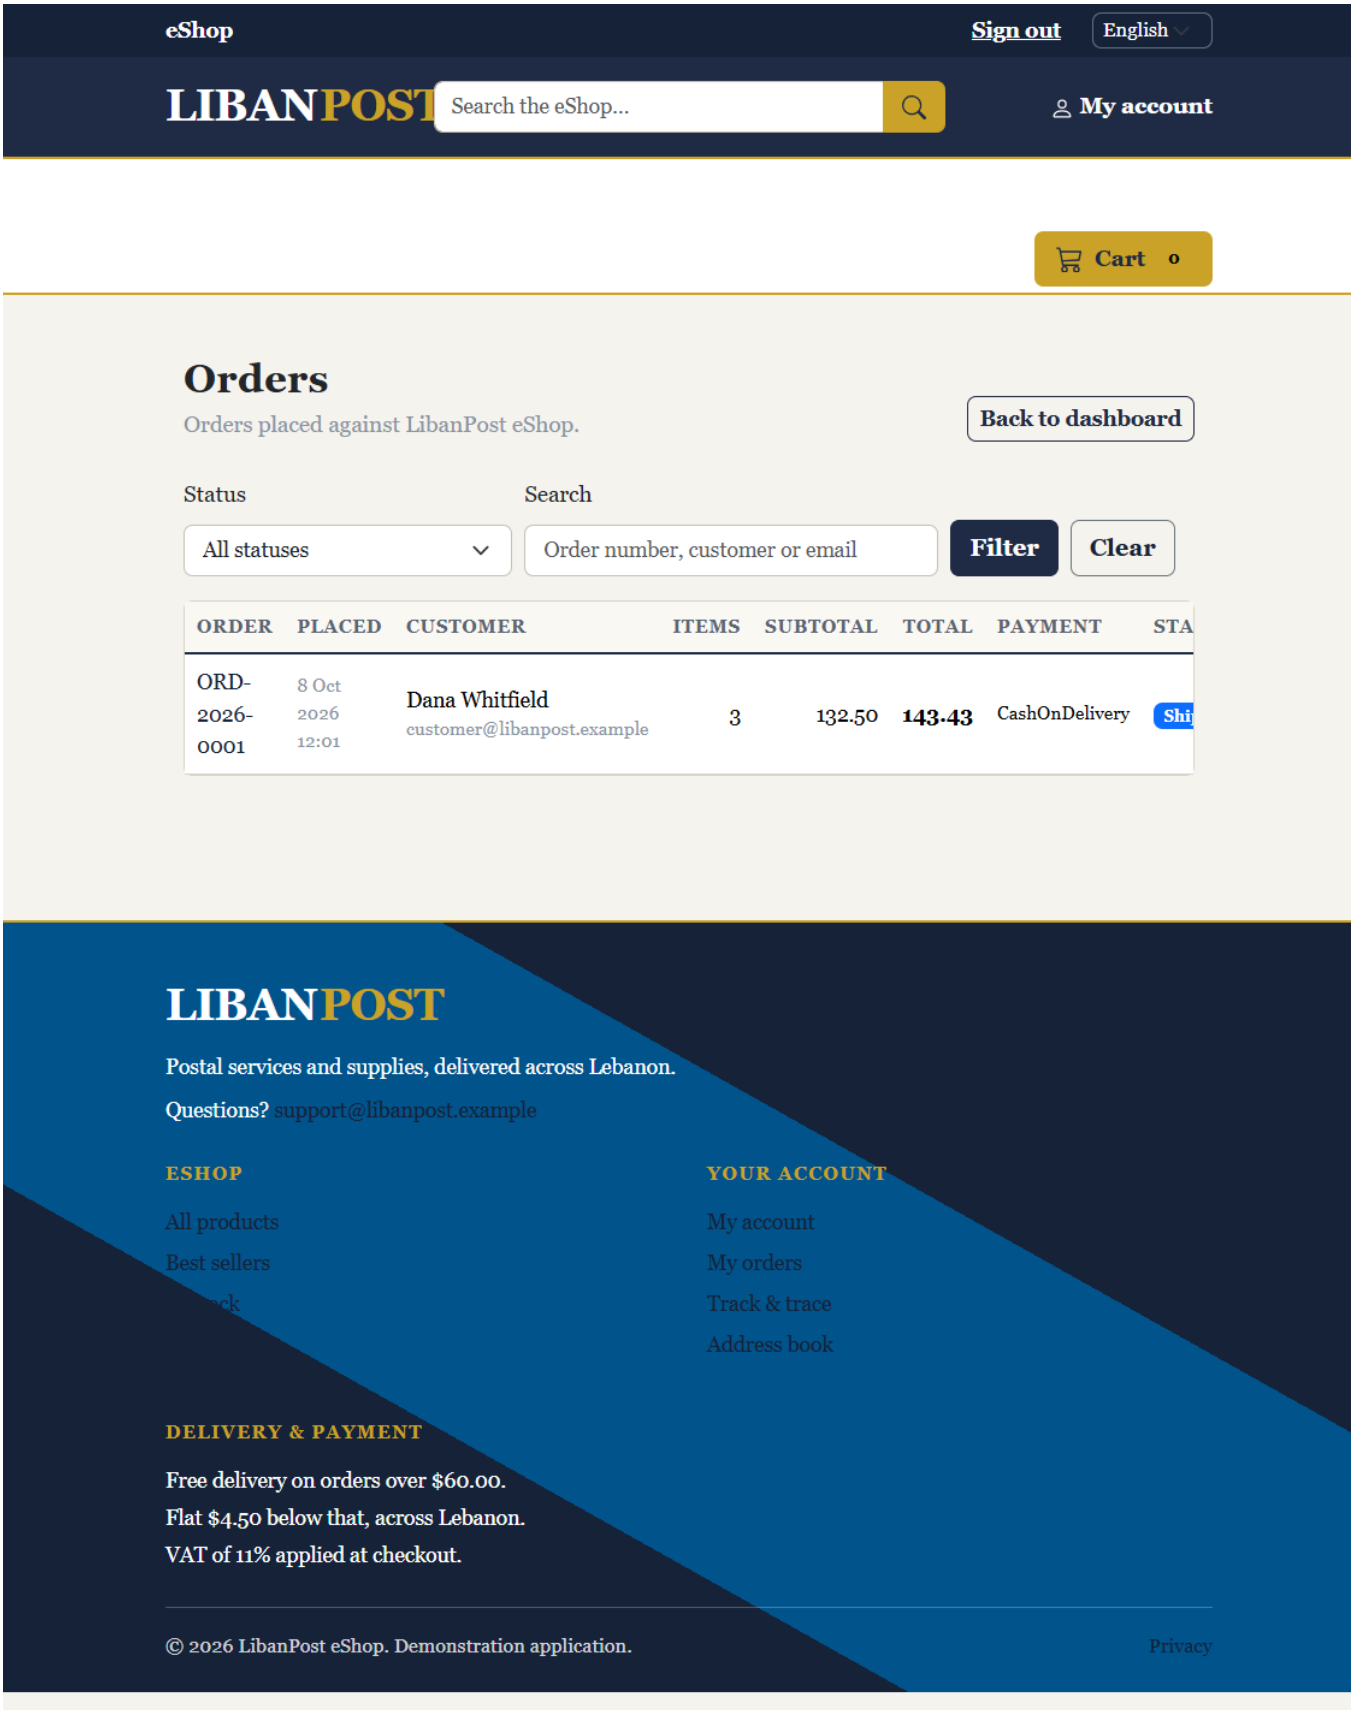

New / edit product (vendor) — `/Vendor/Products/Create`

Vendor product form

Exactly the same product editor as the admin create page (Details / Variants / Organisation / Images), but the shop is fixed to the vendor's own and the vendor cannot change another seller's data.

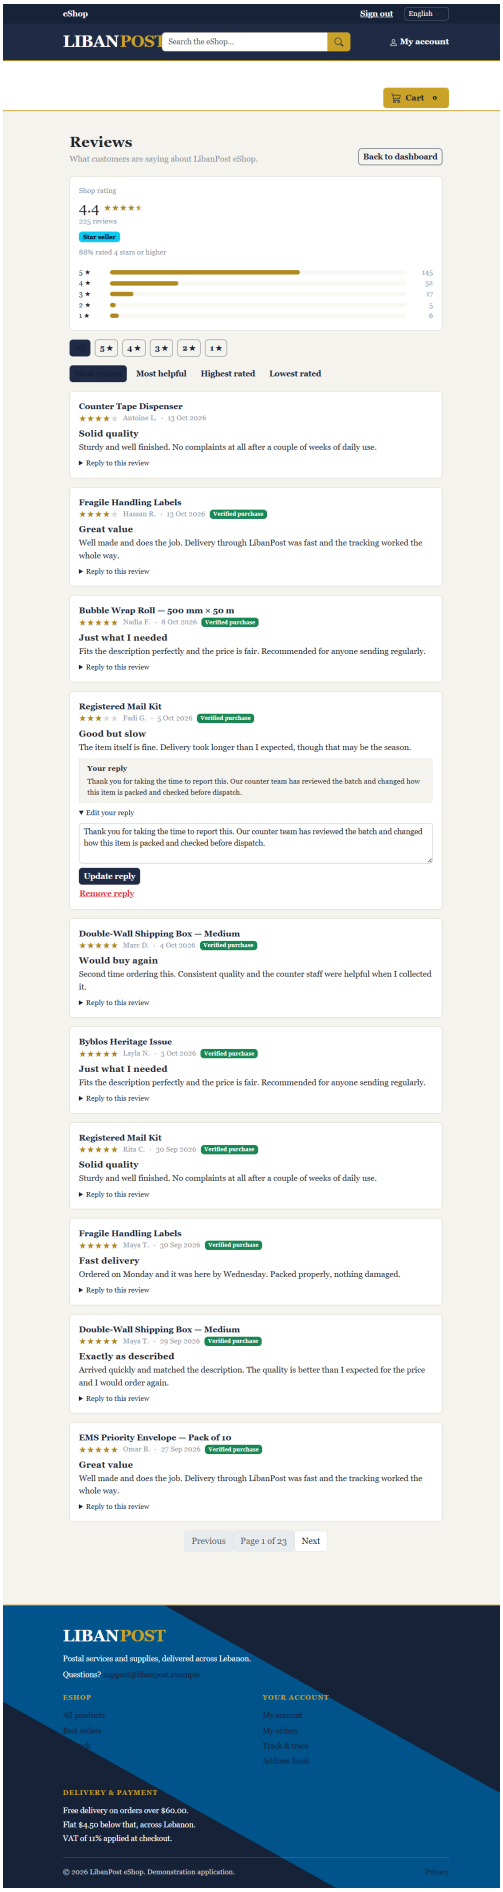

Orders — `/Vendor/Orders`

Vendor orders

Status dropdown + search box (order number, customer, email) — one form, `GET`. The table shows only orders containing the shop's items, with items, subtotal, total, payment method and status. Vendors can progress their own orders (fulfil/ship) from the detail pages.

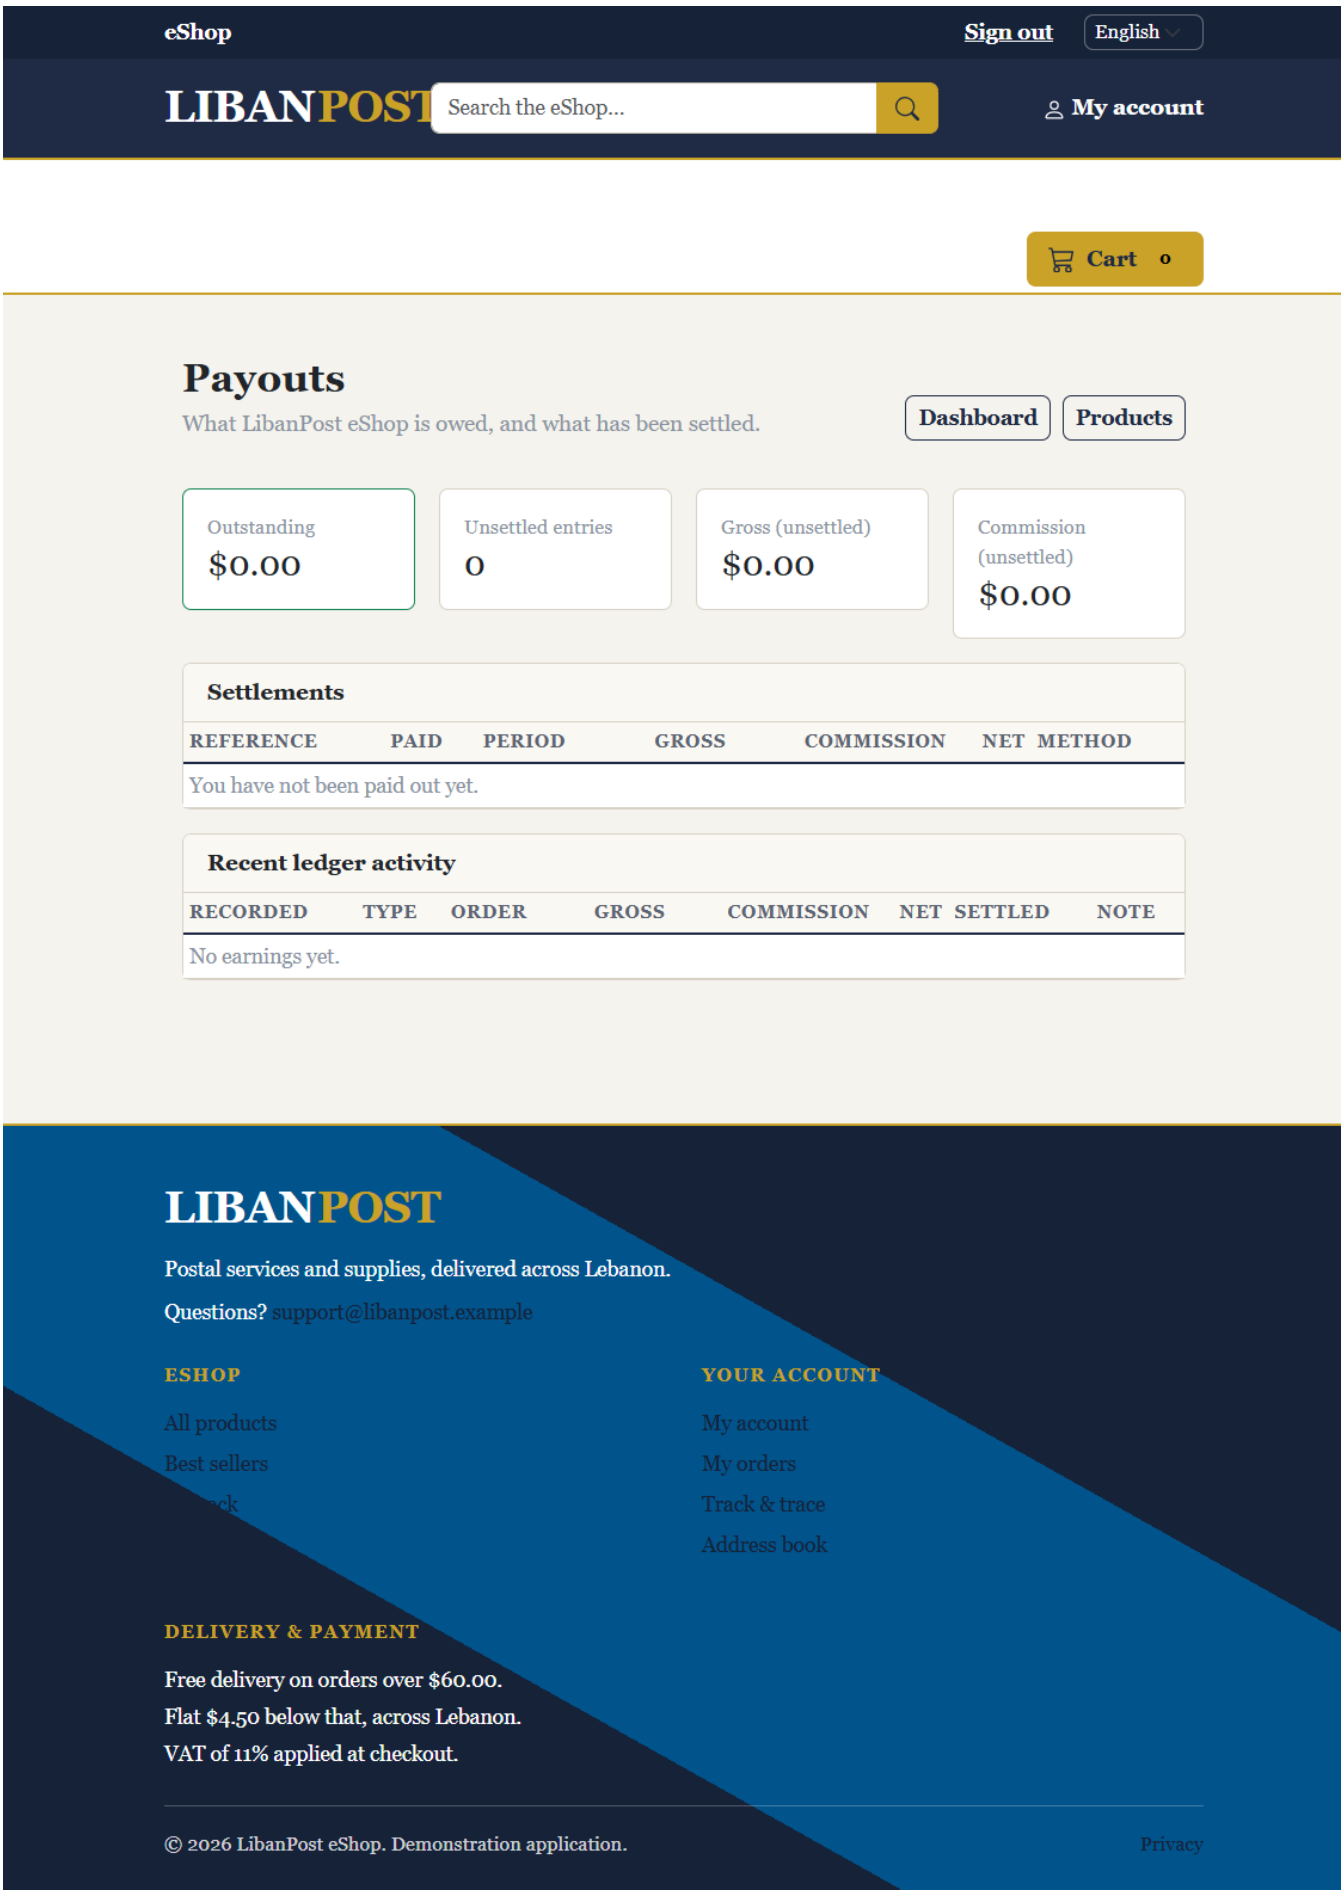

Reviews — `/Vendor/Reviews`

Vendor reviews

Shop rating summary (4.4★, 225 reviews, **Star seller** badge at ≥4.2) plus a rating distribution chart and filter buttons (5★…1★, sorts). Each card shows product, stars, date, Verified-purchase badge, and the **Your reply** block: vendors can post a public reply, edit it, or remove it — which affects only their reply, never the customer's review.

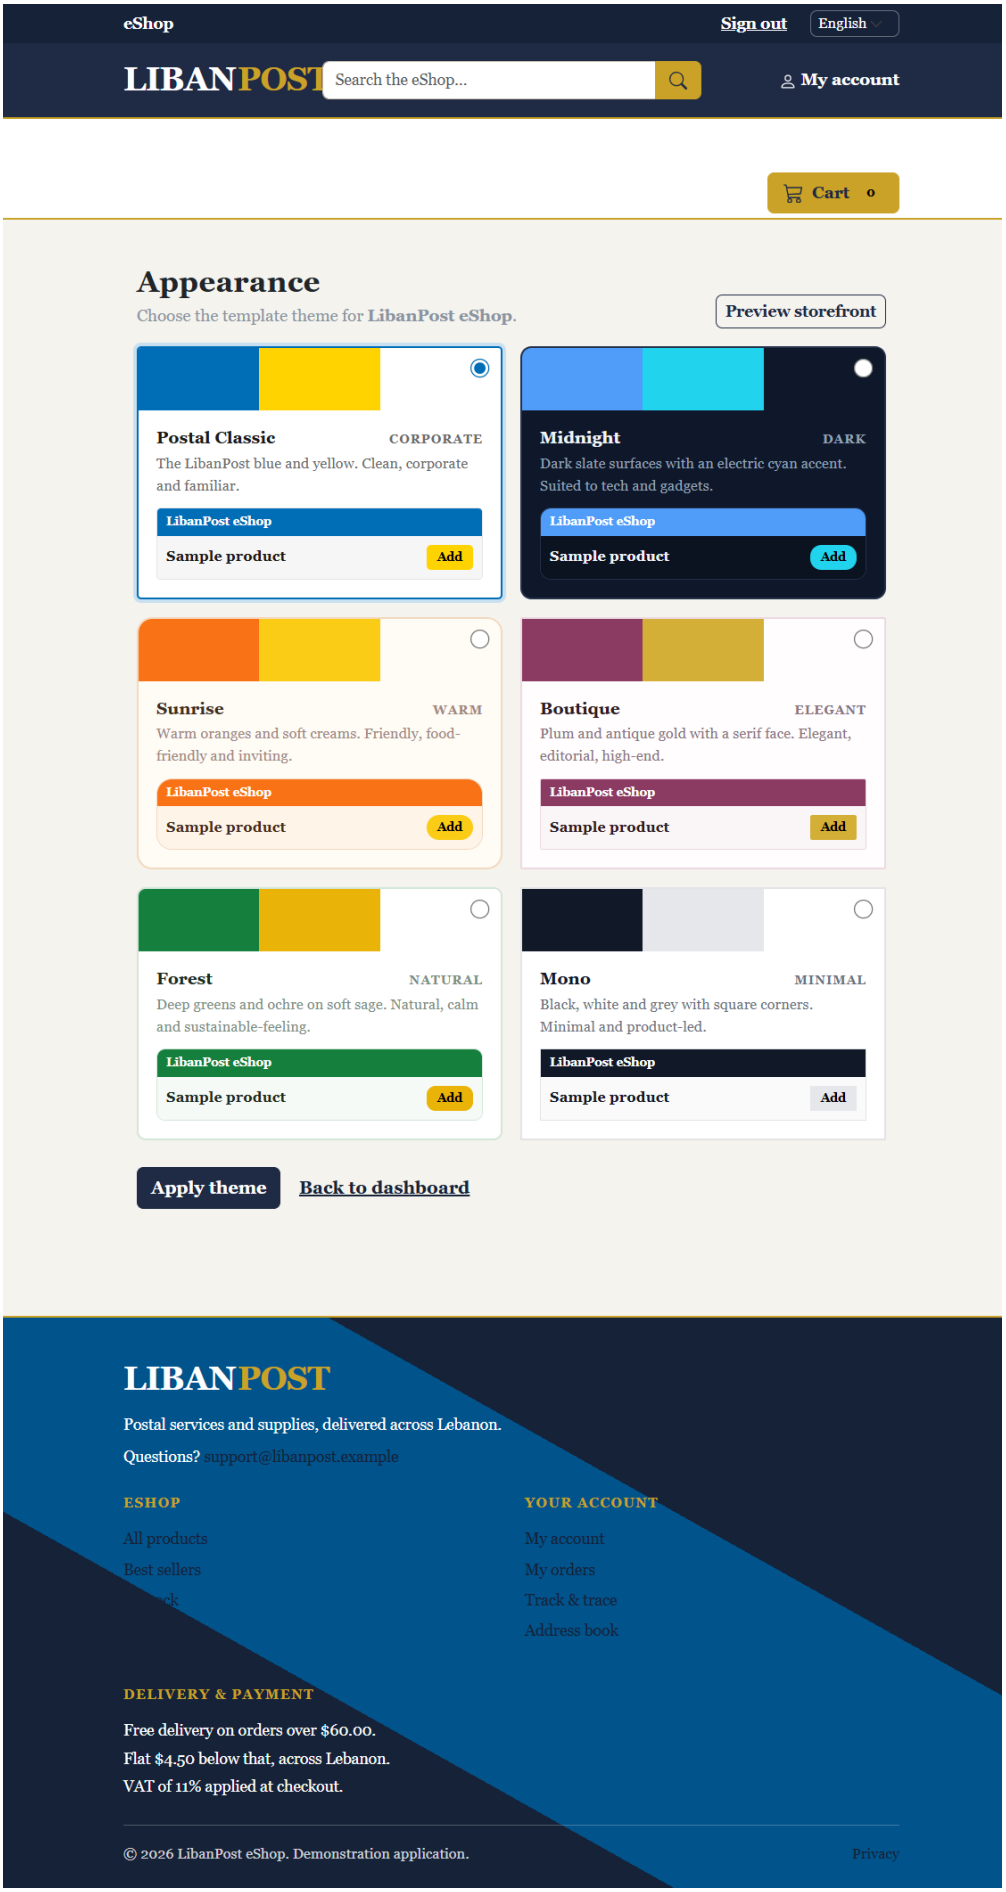

Payouts (vendor) — `/Vendor/Payouts`

Vendor payouts

Outstanding / unsettled / gross / commission tiles, the **Settlements** table (references, period, gross→net per payout method), and **Recent ledger activity** — the money trail the marketplace records as orders become payable.

Appearance

A **radio** list of six template themes (Postal Classic, Midnight, Sunrise, Boutique, Forest, Mono), each rendered as a live mini-preview. **Apply theme** re-colours the vendor's storefront instantly; **Preview storefront** opens it in a new tab.

Register your shop — `/Vendor/Onboarding/Register`

Shop registration

For accounts with no shop yet. Fields: `Shop name` (required), `Tagline`, `Description`, `Template theme` (one of the six), and the terms acceptance checkbox. Optional contact details (contact name, phone, email, address, city, postal code, pickup location — country defaults to *Lebanon* in the model) round out the form. A new shop starts as **pending approval**, then appears for the administrator in `/Admin/Shops`.

Part 6 — Returns, refunds and the audit trail

The pages below were added with the returns (RMA) and audit-trail work. They are described in text here; the existing 47 screenshots above cover the storefront, cart, checkout, account, admin and vendor surfaces that did not change.

Returns queue — `/Admin/Returns`

The marketplace's RMA desk. Filter bar (status select + free-text search on RMA reference, shopper email or order number) above a table of requests; the counters above it show how many sit at *requested*, *approved* and *received*. Each row links to the return detail. Export links (CSV / Excel) honour the current filter.

Return detail (admin) — `/Admin/Returns/Details/{id}`

The full return: shopper's request, the shop's decision and note, the line-by-line units and values, the audit history beneath it. Depending on state, the administrator can **approve** or **reject** (with a note), **record goods received** (restocks the shelf), or **issue the refund** (the amount is computed — goods + proportional tax, shipping only on a full return — and is capped by the ledger remainder and `GrandTotal − RefundedTotal`).

Audit trail — `/Admin/Audit`

Newest-first table of administrative actions: timestamp, actor, dotted action (`shop.approved`, `refund.failed`, `payout.reversed`, …), the subject as *entity type* + *id*, and the one-sentence summary. Filter form with four fields — `actionName`, `entityType`, `entityId`, `actor` — each with a datalist of suggestions derived from the data. Export links (CSV / Excel, up to 500 rows).

Request a return — `/Orders/RequestReturn/{id}`

Shopper-facing form on an eligible order: one row per order line with the quantity input capped at the units still returnable (`max` attribute, re-checked server-side), and a `Note` textarea (≤ 1000 chars). `OrderId` and each `OrderLineId` are hidden. An order with nothing left to return, or already holding an open return, is refused before the form renders.

Vendor returns — `/Vendor/Returns`

The shop's RMA worklist: `All` / `Open only` filter links, then reference, order, requested date, units, goods value and a status badge per row, with a **Review** button into the detail.

Vendor return detail — `/Vendor/Returns/Details/{id}`

Approve / reject (with a note the shopper sees) and **record goods received** — which restocks the listing pool (or the shared variant stock) and writes a return-stamped movement. The refund itself is staff-only and never appears here.

Payout detail (admin) — `/Admin/Payouts/Details/{id}`

Read-only statement plus, while the payout is still `Paid`, two correction forms: **Mark failed** (`reason`, required, ≤ 500 chars) and **Reverse** (`note`, optional). A failed or reversed payout shows its reason, handler and timestamp instead.

Shops (admin) — payout destination and history

`/Admin/Shops` now shows each shop's recorded payout destination (account name, bank, IBAN, or "Not provided") and a **history** link to `/Admin/Audit` pre-filtered to that shop. The four per-shop forms remain: **Approve** (`id`, `commissionPercent`), **Reject** (`id`, `reason`), **Suspend** (`id`, `reason`), **Reinstate** (`id`).

Payouts (vendor) — bank details and badges

`/Vendor/Payouts` now carries the **payout destination** form (`bankAccountName`, `bankName`, `bankIban`) at the top, plus a status badge on every settlement (`Paid`, `Failed`, `Reversed`) with the reason shown on failed/reversed rows.

Shop registration — bank fields

`/Vendor/Onboarding/Register` now collects `BankAccountName`, `BankName` and `BankIban` alongside the existing shop details, and a re-application pre-fills them.

Where to look next

- `PAGES_AND_FORMS.md` — every route, model and field, plus Appendix C's validation rules.
- `USER_GUIDE.md`, `VENDOR_GUIDE.md`, `ADMIN_GUIDE.md` — task-oriented walkthroughs.
- `README.md` (repo root) and `docs/README.md` — the full documentation index.
